

CAUTIONARY STATEMENTS

PEA Cautionary Note

Readers are cautioned that the PEA is preliminary in nature; it includes inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the PEA results will be realized. Mineral resources that are not mineral reserves do not have demonstrated economic viability. Additional work is needed to upgrade these mineral resources to mineral reserves.

Forward-Looking Statements

This presentation contains "forward-looking" statements and information relating to the Company, Macpass and Mactung Projects that are based on the beliefs of Company management, as well assumptions made by and information currently available to Company management. Such statements reflect the current risks, uncertainties and assumptions related to certain factors, including but not limited to, without limitations, exploration and development risks, expenditure and financing requirements, general economic conditions, changes in financial markets, the ability to properly and efficiently staff the Company's operations, the sufficiency of working capital and funding for continued operations, title matters, First Nations relations, operating hazards, political and economic factors, competitive factors, metal prices, relationships with vendors and strategic partners, governmental regulations and oversight, permitting, seasonality and weather, technological change, industry practices, and one-time events. Additional risks are set out in the Company's prospectus dated May 9, 2017, and filed under the Company's profile on SEDAR+ at www.sedarplus.ca. Should any one or more risks or uncertainties materialize or change, or should any underlying assumptions prove incorrect, actual results and forward-looking statements may vary materially from those described herein. The Company does not undertake to update forward-looking statements or forward-looking information, except as required by law.

NI 43-101 Qualified Persons

Dr. Jack Milton P.Geo., VP Geology, Fireweed Metals and a Qualified Person under the meaning of Canadian National Instrument 43-101, is responsible for the technical information in this presentation. Leon McGarry, P.Geo., Senior Resource Geologist for CSA Global Canada Geosciences Ltd. is independent of Fireweed Metals. and a 'Qualified Person' as defined under Canadian NI 43-101. Mr. McGarry is responsible for the Mineral Resource Estimate for the Macpass Project and directly related information in this presentation – see "NI 43-101 Technical Report on the Macmillan Pass Zinc-Lead-Silver Project, Watson Lake and Mayo Mining Districts Yukon Territory, Canada" February 23, 2018. Michael Makarenko, P.Eng., Project Manager for JDS Energy and Mining, Inc., is independent of Fireweed Metals. and a 'Qualified Person' as defined under Canadian NI 43-101. Mr. Makarenko is responsible for the PEA results for the Macpass Project and directly related information in this presentation – see Fireweed Technical Report titled "NI 43-101 Technical Report Macmillan Pass Project Yukon Territory Canada" July 9, 2018. Garth Kirkham, P.Geo., of Kirkham Geosystems Ltd. is independent of Fireweed Metals and a 'Qualified Person' as defined under Canadian NI 43-101. Mr. Kirkham is responsible for the Mineral Resource Estimate for the Mactung Project and directly related information in this presentation – see technical report entitled "NI 43-101 Technical Report, Mactung Project, Yukon Territory, Canada," with effective date July 28, 2023. Fireweed Technical Reports can be found at https://www.sedarplus.ca/.

Notes

* References to relative size and grade of the Mactung resources and Macpass resources in comparison to other tungsten and zinc deposits elsewhere in the world, respectively, are based on review of the Standard & Poor's Global Market Intelligence Capital IQ database.

Why Critical Metals? Why Fireweed?

We're leveraging our local and regional knowledge to create a new world-class critical metals district in Yukon, Canada

Coming Bull Market

Chronic underinvestment and protracted bear market has left cupboard bare

Best-in-Class Projects

Macpass and Mactung have grade, scale, economics and upside potential

Critical Metals Essential

Geopolitical conflict and resource nationalism are fueling Western critical metals focus

Massive Global Stimulus

Fiscal stimulus will focus on infrastructure, bullish for zinc

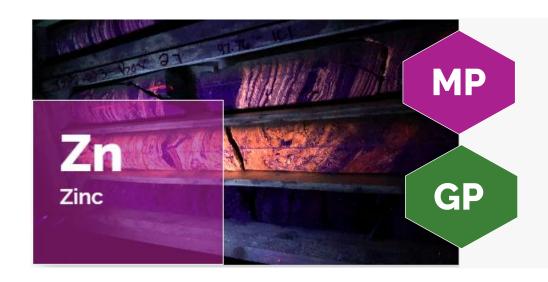

Strong Backers, Cashed Up

Teck, Lundins, others have invested, projects getting recognition they deserve

Catalysts Coming

Resource update and economic studies, all due in next few months

CRITICAL METALS FOR GENERATIONS

Zinc's unique properties make it an essential metal for everyday life. Zinc plays a crucial role in:

- Renewable Energy
- Transportation
- Food Security
- Energy Storage
- Healthcare
- Infrastructure
- Industrial Applications
- Electronics

Tungsten is an extremely versatile metal, essential for industrial applications in the following sectors:

- Automotive parts
- Aerospace & Defense
- Industrial machinery
- Drilling

- Boring and cutting equipment
- Logging and mining
- Electrical and electronics appliances

PROJECT HIGHLIGHTS

MACPASS PROJECT

- One of the world's largest high-grade undeveloped zinc projects*
- Newly discovered Boundary zone delivering best-in-class drill results
- Resource update including Boundary inaugural resource due in Q2 2024

MACTUNG PROJECT

- World's largest high-grade tungsten deposit*
- Environmental Assessment complete, clear path to production
- Ongoing project optimizations, explore government support for critical metals projects
- PEA due Q2 2024

GAYNA PROJECT

- Exceptional exploration potential for zinc, germanium, gallium, lead, and silver
- Transformational new deposit model supported by geophysics ready for drill testing
- Acquired via low-cost staking, high potential for new discoveries

PROJECT LOCATIONS & EXISTING INFRASTRUCTURE

> Macpass (Zn-Pb-Ag) & Mactung (W) Projects

>950 km² land package

Projects are accessible via road and existing airstrip at site

> Deep-sea port with access to Asia

Gayna (Zn-Pb-Ag) **Project**

New zinc exploration project with intriguing potential and significant mineralization

Northwest **Territories**

Creek

PROGRESS & CATALYSTS

COMPLETED 2023

- +\$50M raised
- Acquisition of Mactung finalized
- Updated resource for Mactung
- Largest drill campaign at Macpass with >22,500 m
- Expanded Boundary Zone
- Expanded camp and facilities, increasing operational capacity and operating window
- Gayna ground and geophysical validation and drill target generation

UPCOMING 2024

- Updated Macpass Mineral Resource Estimate
- Mactung PEA
- 2024 program in the planning stage for Macpass, Mactung and Gayna, which may include:
 - Step-outs at Tom, Jason and Boundary Zone
 - Generative work across the Macpass property
 - Potential drill program at Gayna

Macpass Project

Overview

We respectfully acknowledge that the Macpass Project is located on the Traditional Territories of the Kaska Dena Nation and the First Nation of Na-Cho Nyäk Dun.

ONE OF THE WORLD'S LARGEST UNDEVELOPED ZINC PROJECTS

- Host to multiple zinc-lead-silver deposits within a 940 km² land package
- Accessible via the North Canol Road and the Macmillan Pass aerodrome, ~250 km from Ross River

| Macpass 2018 Resource Estimate | | | | | | | |
|---|-----------------|-------|-----------|----------|----------|--|--|
| | Tonnage (Mt) | Zn | Pb | Ag (g/t) | ZnEq¹ | | |
| Indicated | 11.2 | 6.59% | 2.48% | 21.33 | 9.61% | | |
| Inferred | 39.5 | 5.84% | 3.14% | 38.15 | 10% | | |
| 2018 Preliminary Economic Assessment* | | | | | | | |
| Life of Mine (Lo | OM) | | | | 18 years | | |
| LOM Tonnage | | | | | 32.7 Mt | | |
| LOM Production (Zn/ZnEq) ¹ 2.887 / 2 | | | 4.729 Mlb | | | | |
| Initial CAPEX | | | | | C\$404M | | |
| After-Tax NPV | 8% ¹ | | | | C\$448M | | |
| After-Tax IRR ¹ | | | | | 24% | | |

See Cautionary Statements for QP Statement and technical report reference.

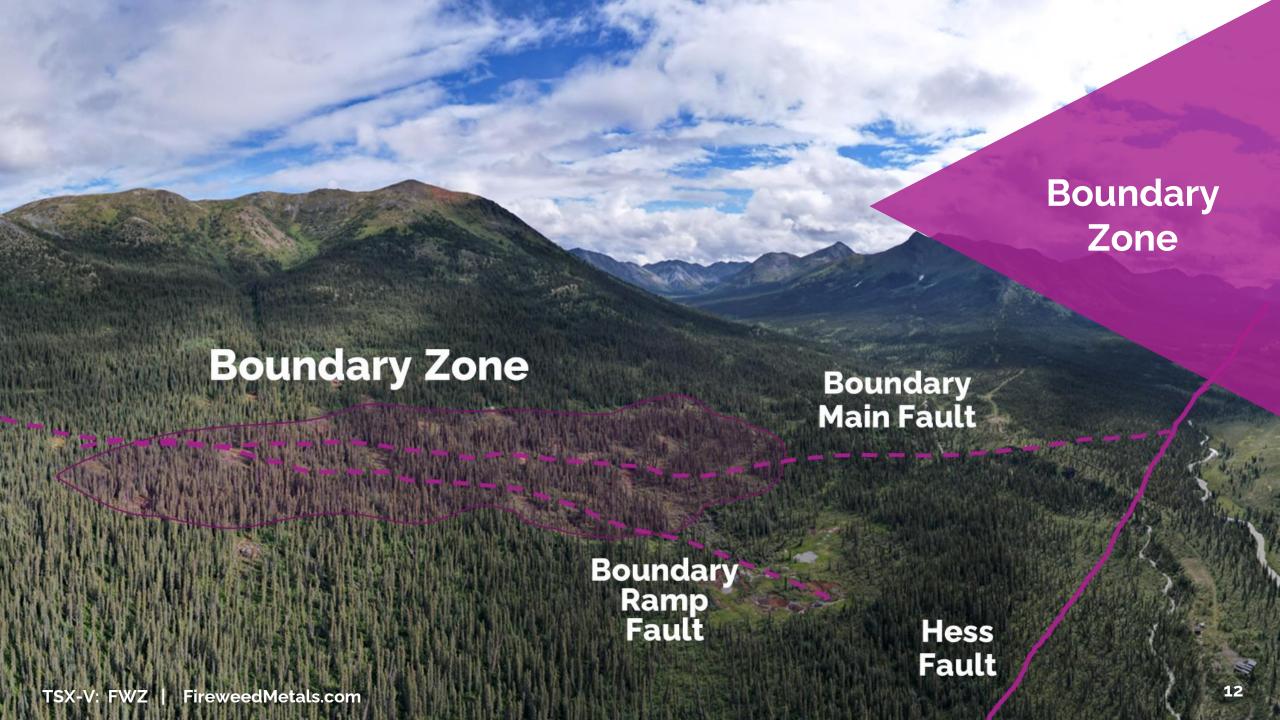

+ 6 Years Drilling

- Additional drilling at Tom & Jason will both expand resource and improve grades in some zones
- Boundary Zone inaugural resource expected in spring 2024
- Additional engineering to improve pits, metallurgy and optimize mine plan
- Government \$71M funding commitment to access roads, included as project CAPEX in 2018 PEA, now offset

Updated **Resource Statement** and new **Economic Studies** will reflect these improvements, and add to an already **World-Class Resource** and **Robust Mine Plan**

Based on 2018 PEA commodity price assumptions (base case): US\$1.21/lb, Zn, US\$0.98/lb Pb, US\$16.80/oz Ag.

^{*}Based on review of undeveloped zinc projects in the Standard & Poor's Global Market Intelligence Capital IQ database.

WHY IS BOUNDARY ZONE SIGNIFICANT?

Robust potential for both scale and grade derived from stockwork/brecciated mineralization + high-grade massive sulphide stratiform layers

Scale

NB19-002: 230 m of 4.51% Zn from surface, including 100 m of 8.73% Zn, with 6.4m of 43.5% Zn

NB20-002: 213 m of 4.42% Zn, including 25.58% Zn over 5.81 m

NB21-002: 32.99 m of 9.91% Zn and 10,42 m of 23.77% Zn

High Grade

NB22-002: 124.5 m of 12.3% Zn, 1.3% Pb, 45.9 g/t Ag, including 60 m of 19% Zn, 1.6% Pb, 64.7 g/t Ag

NB23-007: **Upper zone** of 82.5 m grading 11.9% Zn, 2.2% Pb and 81.2 g/t Ag + **Lower zone** of 118 m grading 15.1% Zn, 2.8% Pb, and 85.8 g/t Ag

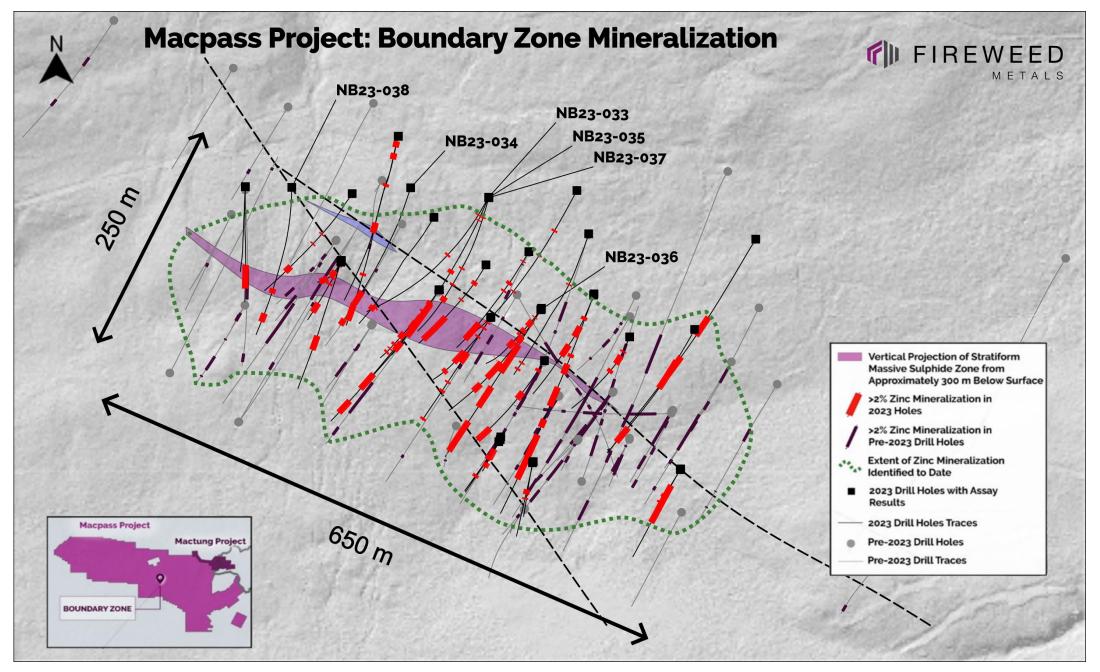

NB23-028: Upper zone of 66.11 m grading 7.13% Zn, 0.97% Pb, and 54.8 g/t Ag + Lower zone of 143.95 m grading 14.45% Zn, 1.15% Pb, and 60.0 g/t Ag

NB23-036: 45.22 m of 18.98% Zn, 2.24% Pb, and 114.9 g/t Ag, including 39.22 m of 20.84% Zn, 2.48% Pb, and 115.4 g/t Ag

NB23-037: 118.36 m of 11.58% Zn, 1.75% Pb, and 54.9 g/t Ag, including 27.63 m of 19.06% Zn, 0.74% Pb, and 58.2 g/t Ag

DRILLING HIGHLIGHTS

2023 Drilling Program

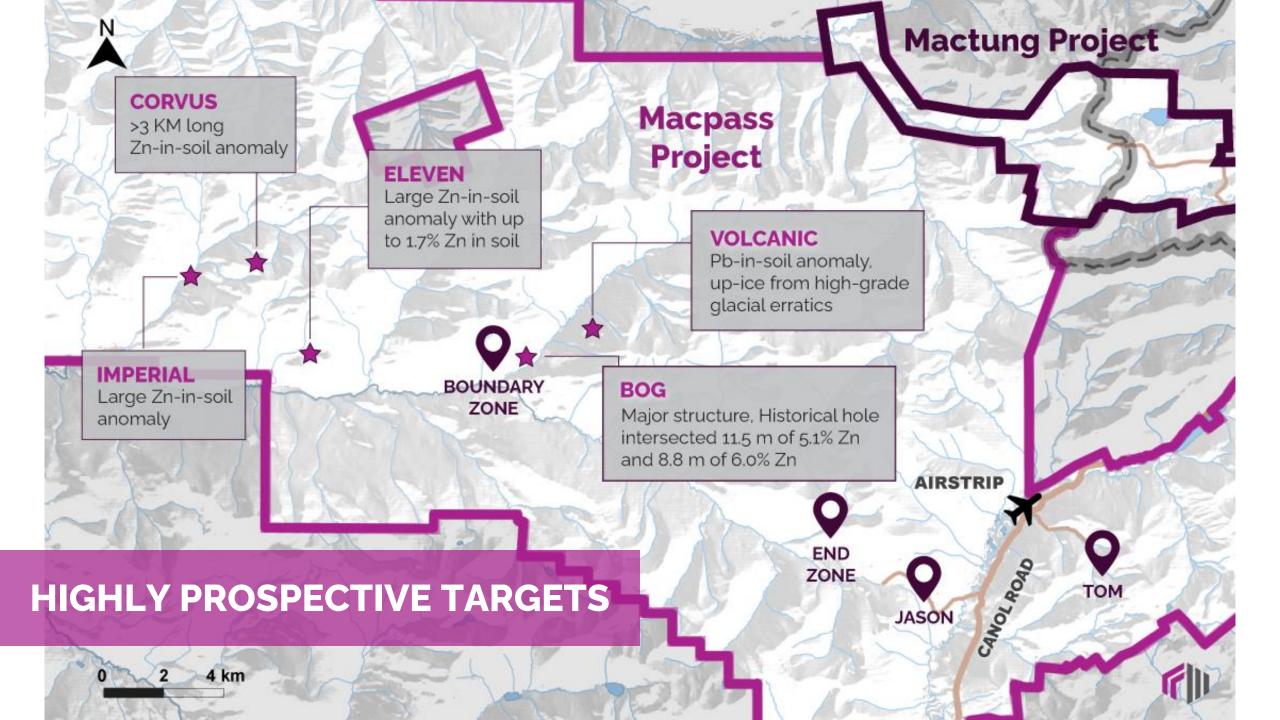

2023 program achieved 22,500 m of drilling mostly focused on Boundary, Tom, and Jason zones, with step-out holes at Boundary Zone, Tom South and Jason South

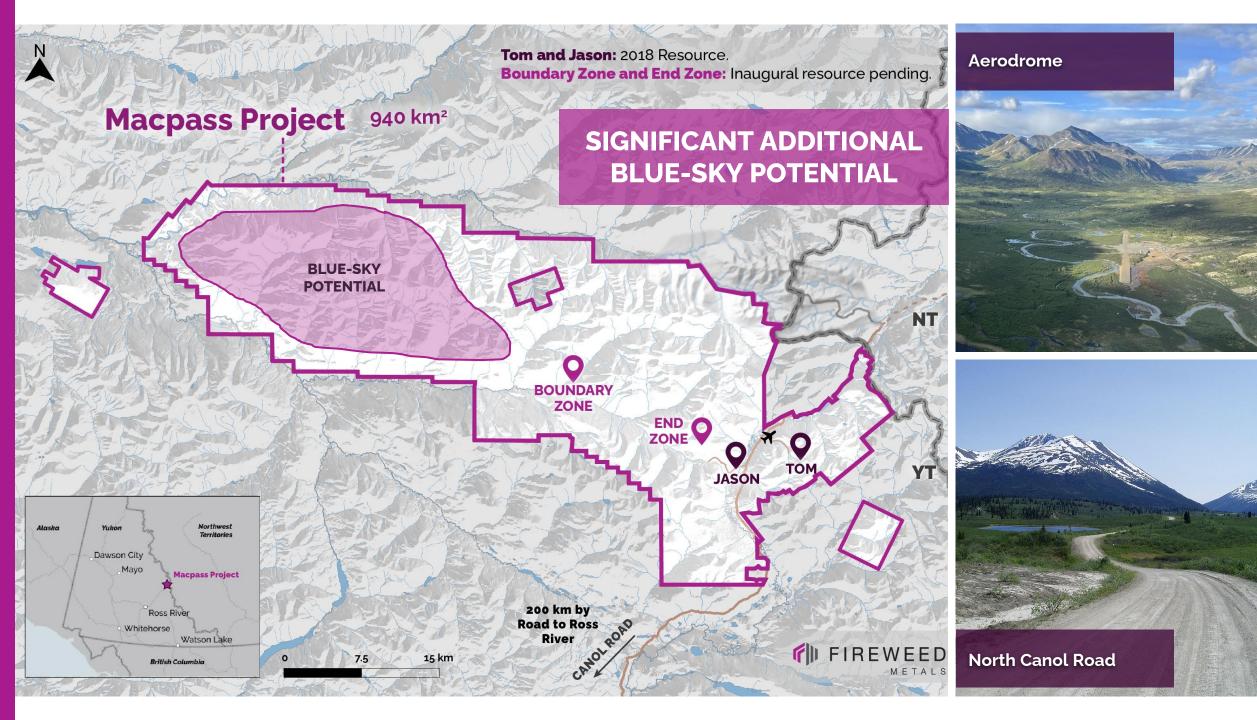

Boundary

- In 2023, zinc mineralization was hit in all completed holes, connecting Boundary Main and Boundary West with a highgrade feeder zone.
- The Boundary Zone stratiform mineralization has a strike length of over 550 m and has been followed down-dip for at least 400 m.
- From near surface to a depth of at least 400 m, broadly disseminated vein and breccia mineralization exists in a diffuse halo around the stratiform mineralization with a strike of at least 650 m and a width of at least 250 m. These veins and breccias represent a bulk-tonnage style target that is conducive to an open-pit extraction scenario.

Tom & Jason

- Intersected mineralization in all completed drill holes at Tom with the objective of resource expansion.
- Discovery of Tom South, an extension of mineralization that may connect Tom West and Southeast and remains open down-plunge.
- Intersected mineralization in both holes at Jason South with the goal of resource expansion.

Mactung Project

Overview

We respectfully acknowledge that the Mactung Project is located on the Traditional Territories of the Kaska Dena Nation and the First Nation of Na-Cho Nyäk Dun, and the Sahtu Settlement Area.

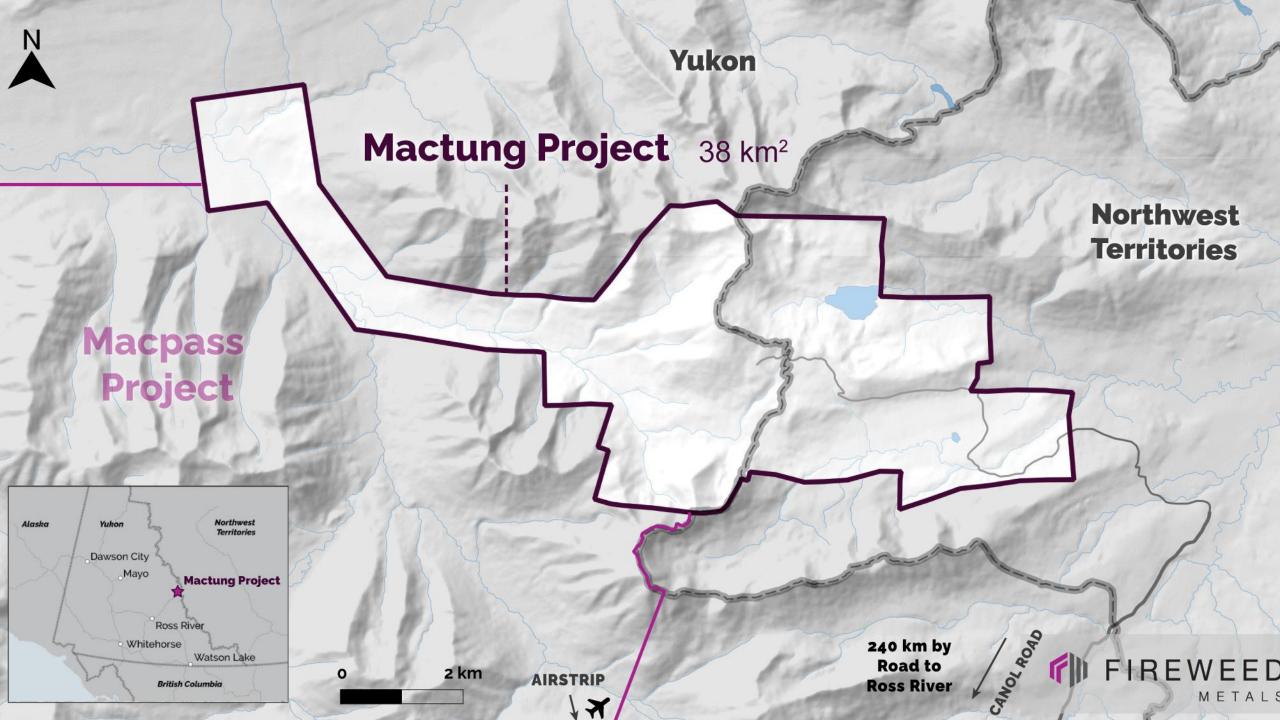

THE WORLD'S LARGEST HIGH-GRADE TUNGSTEN DEPOSIT

- Host to a large tungsten deposit within a 38 km² area, 100% owned by Fireweed
- Adjacent to Macpass, and access via the North Canol Road and the Macmillan Pass aerodrome
- Extensive drilling, engineering, metallurgy, geotechnical, and environmental studies were undertaken in support of a Feasibility Study (2009)
- Environmental Assessment completed, predictable licensing and pathway to construction

Mactung 2023 Resource Estimate

| | Tonnage (Mt) | WO ₃ Grade (%) | Contained WO ₃ (mtu ⁵) |
|-------------------------|--------------|---------------------------|--|
| Indicated (underground) | 12.17 | 1.05% | 12,789,000 |
| Indicated (open pit) | 29.32 | 0.59% | 17,367,000 |
| Total Indicated (UG+OP) | 41.49 | 0.73% | 30,156,000 |
| Inferred (underground) | 2.82 | 0.73% | 2,066,000 |
| Inferred (open pit) | 9.43 | 0.55% | 5,139,000 |
| Total Inferred (UG+OP) | 12.25 | 0.59% | 7,205,000 |

⁵ A metric tungsten unit (mtu) is 10 kilograms of tungsten trioxide (WO₃).

WHY MACTUNG?

CRITICAL METAL

The U.S., Canada and the EU have designated tungsten a critical metal. It has extreme physical characteristics necessary for many industries.

CHINA MARKET DOMINATION

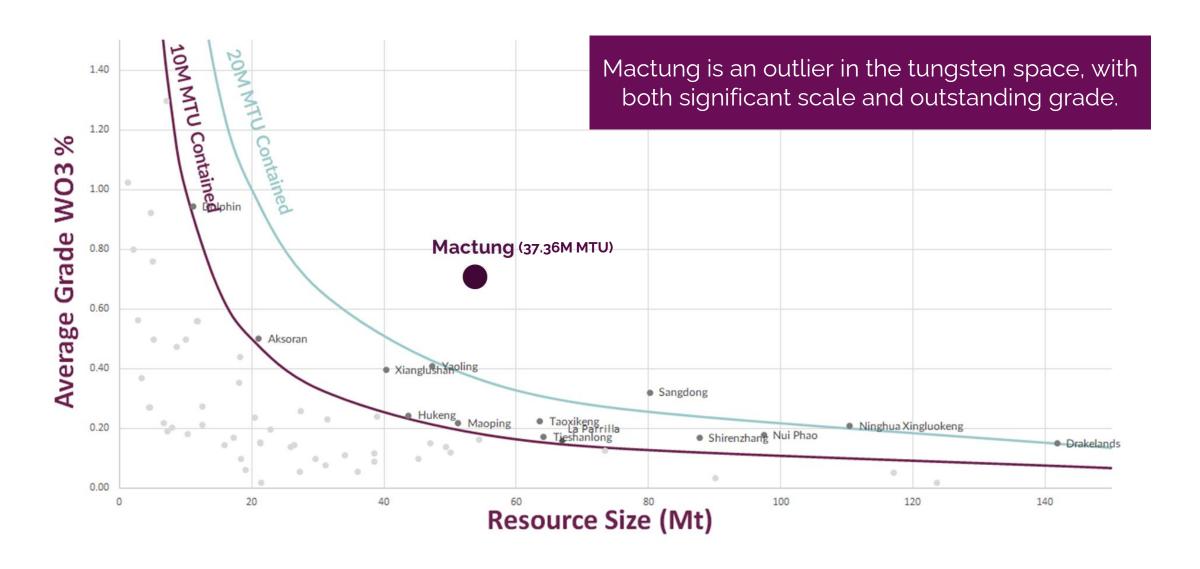

China controls most of the world's tungsten deposits and production, creating risks to the west in an uncertain future.

CHANGING WORLD

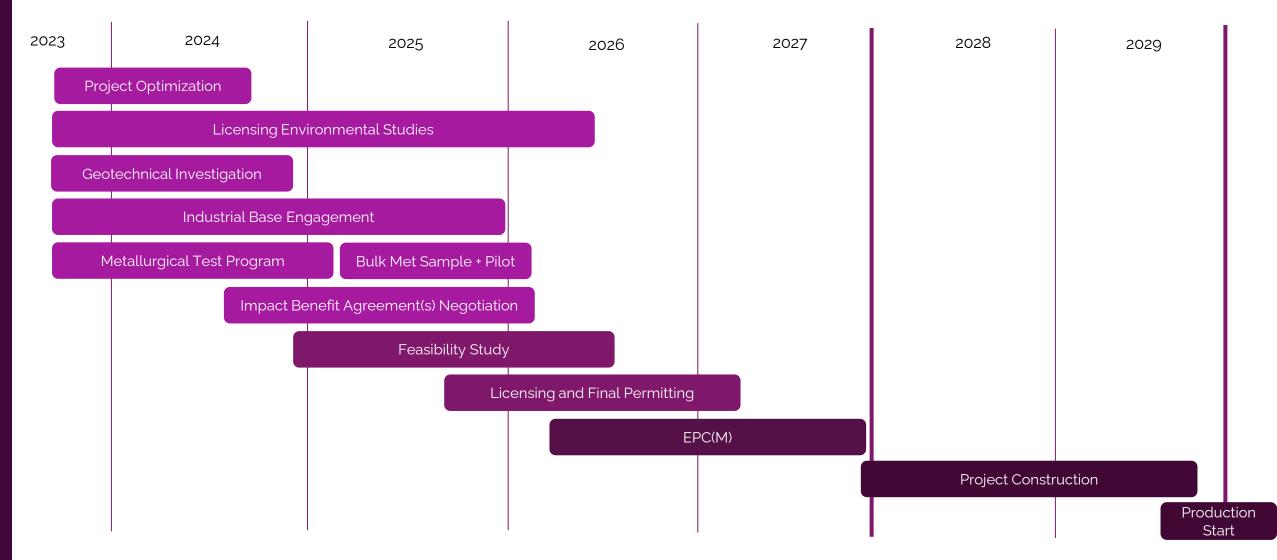

Recent world events have sharpened the focus of western governments on critical metals, creating an opportunity to establish a reliable western source of tungsten.

MACTUNG STANDS OUT

MACTUNG HAS A CLEAR PATHWAY TO PRODUCTION

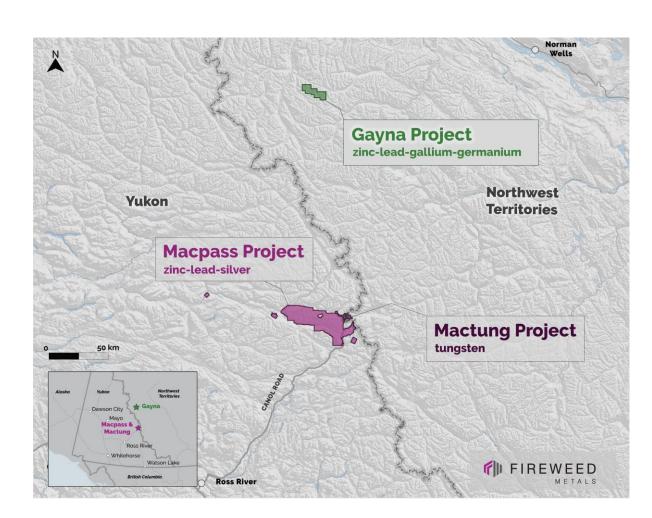

Overview

We respectfully acknowledge that the Gayna Project is located within Settlement Areas of Sahtu and Gwich'in, and the Traditional Territory of First Nation of Na-Cho Nyäk Dun.

24

GREAT EXPLORATION POTENTIAL FOR ZINC, GERMANIUM, GALLIUM, LEAD, AND SILVER

- Located 180 km north of Macpass, in the Mackenzie Mountains, NWT
- Rio Tinto drilled 28,000 m in the 1970s. Claims ultimately lapsed
- New interpretation establishes Gayna's geological setting and mineralization as similar to that of a reefstyle deposit, like Ivanhoe's high-grade Kipushi mine in DRC
- Fireweed acquired Gayna through staking a 128-sqkm area encompassing all historical showings and anomalies
- 2023 geophysical program identified two broad areas with gravity anomalies, while ground gravity survey highlighted multiple potential drill targets.

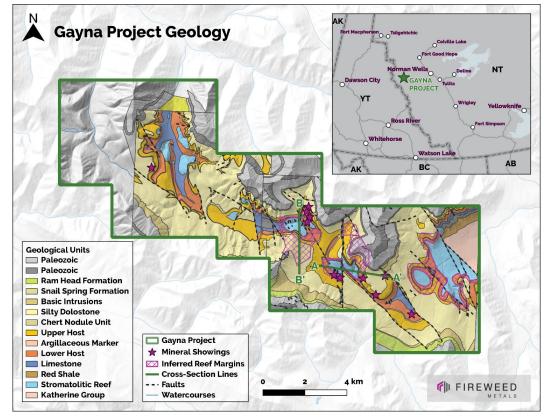

EXPLORATION UPDATE

- High-grade rock samples confirmed the presence of massive sulphide mineralization that also contains elevated gallium and germanium.
- Soil samples confirmed the presence of a strong, 4 km x 1 km, historical zinc and lead soil anomaly
- Results from two ground gravity surveys totaling ~100 line-km have highlighted multiple potential drill targets.
- Completion of a LiDAR topographic survey over the entire 128.75 km² property has generated accurate location data for future drilling and other exploration work.
- The 2022 geophysical program identified two broad areas with gravity anomalies consistent with Kipushi-style targets.
- The 2023 gravity survey expanded the gravity coverage to identify new anomalies, and to refine existing anomalies for future drill-testing.

BLUEPRINT FOR VALUE CREATION

FIREWEED METALS

With best-in-class team and strong backers, Fireweed is poised to deliver shareholder value as we drive our critical metals projects forward during a catalyst-rich 2024.

MACPASS PROJECT

 Resource expansion, inaugural Boundary resource and governmentfunded road upgrades position Macpass in a class of its own among undeveloped zinc-leadsilver projects globally, with blue-sky potential including germanium / gallium.

MACTUNG PROJECT

 Updated environmental and economic studies, including PEA, and government backing for critical metals will drive value at Mactung.

GAYNA PROJECT

Exciting discovery upside and further drill targeting at Gayna, a target-rich project that hosts Kipushi-style geology.

Thank you!

ABOUT FIREWEED METALS

Fireweed is a Canadian company with the mission to explore and develop critical mineral assets through progressive leadership, high standards, innovation, and collaborative partnerships for the benefit of present and future generations.

OUR VISION

Fireweed Metals will sustainably explore and develop critical minerals assets to support the transition to a low-carbon economy. We will focus on leading with integrity, striving for consistency in words and actions, being honest, transparent, and accountable, mitigating health and safety risks, and being progressive and innovative while promoting environmental and social stewardship.

We will act in a way that reflects our core value of respect, for both the environment in which we work and the people we work with. Our approach will foster meaningful relationships with employees and local communities, and will build trusted partnerships benefiting Indigenous peoples and shareholders.

Why Zinc?

Zinc Supply

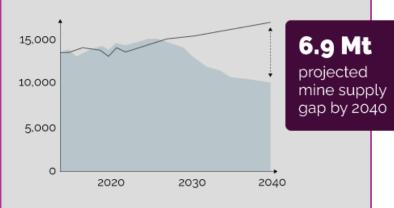

Worldwide Zinc Mine Production in 2022 (kt)*

China is the largest zinc of the world's zinc producer, with production in 2022.

Zinc Mine Production and Demand (kt)

Zinc demand is expected to steadily increase, underpinned by energy transition uses, while supply is expected to fall systematically starting 2025, primarily driven by declining production rates at existing mines and fewer new projects coming on-line.

Why Tungsten?

Uses & Applications

Tungsten's unique properties make it excellent for industrial applications in the following sectors:

By application:

- Automotive parts
- Aerospace & Defense
- Industrial machinery
- Drilling
- Boring and cutting equipment
- Logging & Mining
- Electrical & electronics appliances

Legend:

- Tungsten carbide
- Tungsten alloys & mill products

Scheelite (CaWO4) mineral ore is the preferred source of tungsten

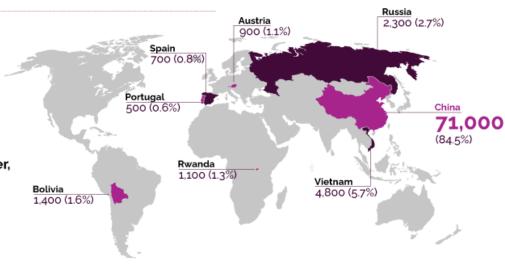

Tungsten Supply

Global production of tungsten in 2022, by country (tonnes)*

China is the world's largest tungsten producer and exporter, with

84.5%

of the world's tungsten in 2022.

Market Factors

No domestic tungsten sources

There has been no North American production of tungsten concentrates since 2015.

Potential supply disruptions

China's dominance of global tungsten primary production has raised concerns about western supply chain vulnerabilities in the event of conflict or embargo.

Critical and strategic

Tungsten has been added to the U.S. and Canada lists of critical metals because of its strategic importance to the countries' economies and national security.

The Canada-US Joint Action Plan on Critical Minerals Collaboration is a strategic plan aiming to advance bilateral interest in securing supply chains for the critical minerals needed for strategic manufacturing sectors, including communication technology, aerospace and defense, and clean technology.

Leveraging Cutting Edge Technologies

- Automated core cutting to improve speed, efficiency, and reduce job hazard and fatigue
- Automated core scanning to improve data capture for future interpretation and validation
- Directional drilling techniques to improve drilling efficiency and accuracy
