FIREWEED METALS

DEFINING A MULTI-GENERATIONAL METALS DISTRICT

Corporate Presentation – March 2025

Proud member of the LUNDINGROUP

CAUTIONARY STATEMENTS

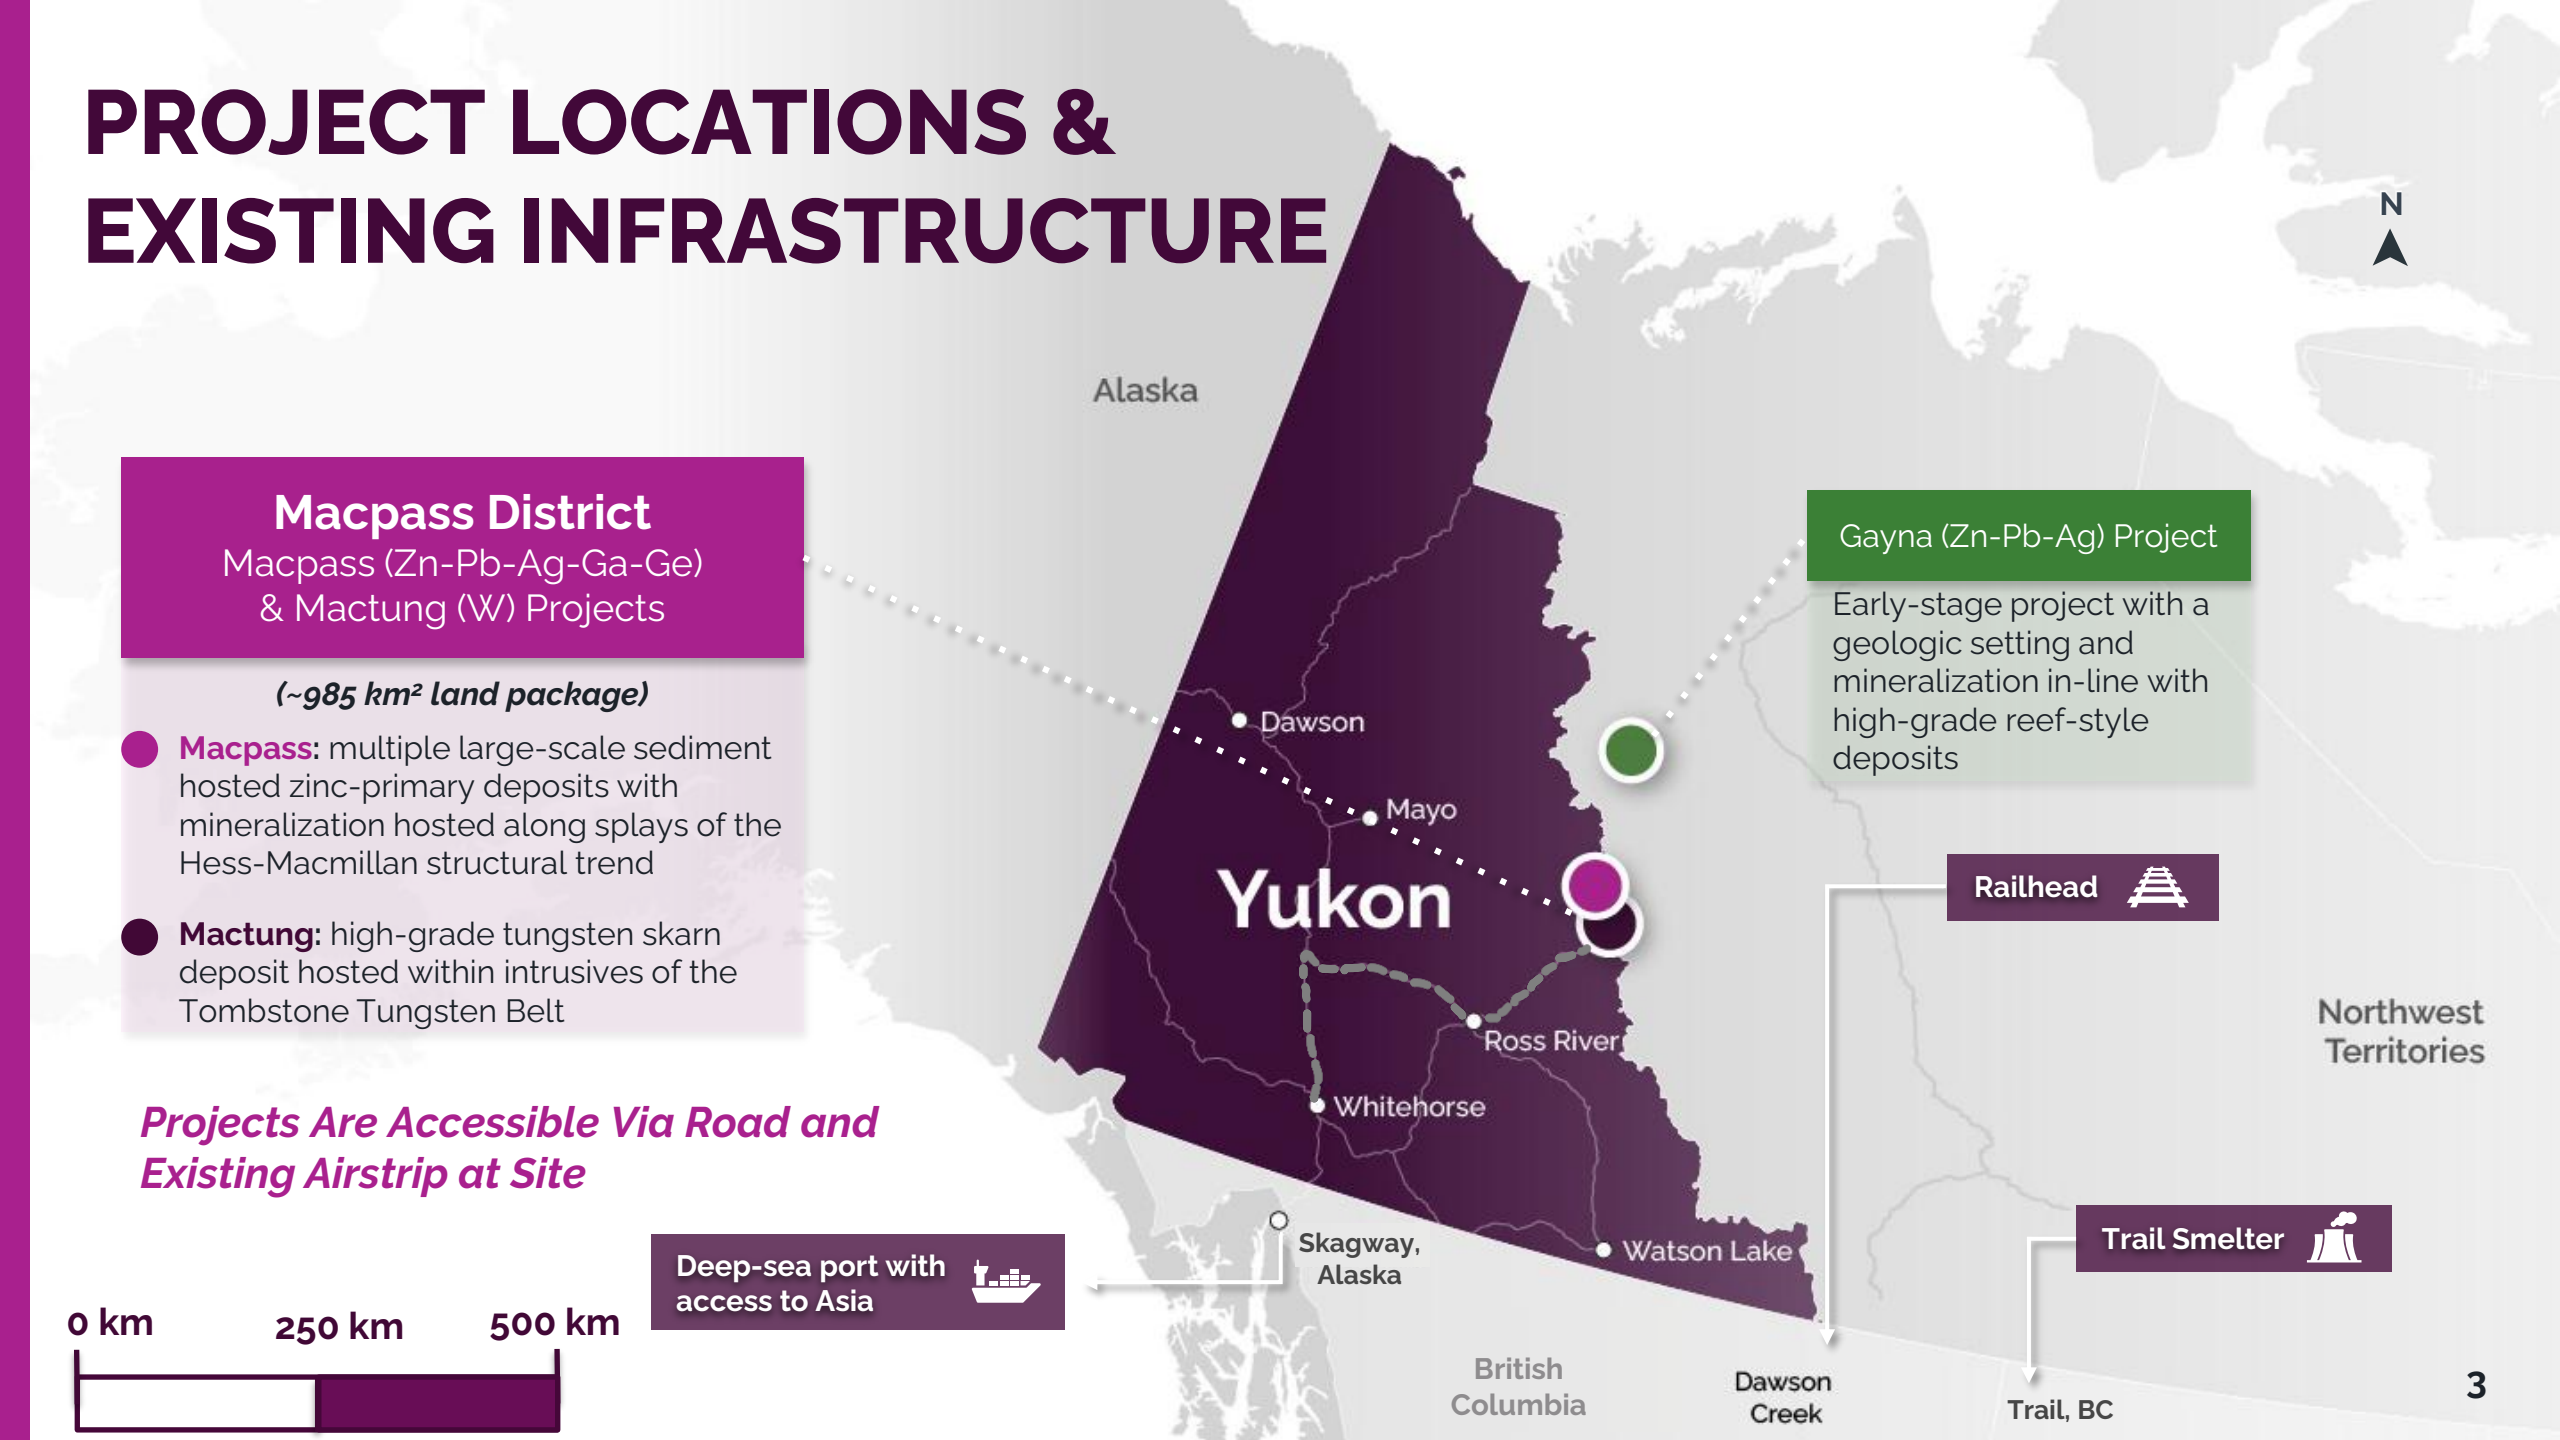
Forward-Looking Statements
This presentation contains "forward-looking" statements and information relating to the Company, Macpass and Mactung Projects that are based on the beliefs of Company management, as well assumptions made by and information currently available to Company management. Such statements reflect the current risks, uncertainties and assumptions related to certain factors, including but not limited to, without limitations, exploration and development risks, expenditure and financing requirements, general economic conditions, changes in financial markets, the ability to properly and efficiently staff the Company's operations, the sufficiency of working capital and funding for continued operations, title matters, First Nations relations, operating hazards, political and economic factors, competitive factors, metal prices, relationships with vendors and strategic partners, governmental regulations and oversight, permitting, seasonality and weather, technological change, industry practices, and one-time events. Additional risks are set out in the Company's prospectus dated May 9, 2017, and filed under the Company's profile on SEDAR+ at www.sedarplus.ca. Should any one or more risks or uncertainties materialize or change, or should any underlying assumptions prove incorrect, actual results and forward-looking statements may vary materially from those described herein. The Company does not undertake to update forward-looking statements or forward-looking information, except as required by law.

The estimation of mineral resources is inherently uncertain and involves subjective judgments about many relevant factors. Mineral resources that are not mineral reserves do not have demonstrated economic viability. The accuracy of any such estimates is a function of the quantity and quality of available data, and of the assumptions made and judgments used in engineering and geological interpretation, which may prove to be unreliable and depend, to a certain extent, upon the analysis of drilling results and statistical inferences that may ultimately prove to be inaccurate. Mineral resource estimates may require re-estimation based on, among other things: (i) fluctuations in the price of zinc and other metals; (ii) results of drilling; (iii) results of metallurgical testing, process and other studies; (iv) changes to proposed mine plans; (v) the evaluation of mine plans subsequent to the date of any estimates; and (vi) the possible failure to receive required permits, approvals and licenses.

NI 43-101 Qualified Persons
Pierre Landry, P.Geo., SLR Managing Principal Resource Geologist. is independent of Fireweed Metals. and a 'Qualified Person' as defined under Canadian NI 43-101. Mr. Landry is responsible for the Mineral Resource Estimate for the Macpass Project and directly related information in this presentation – a technical report entitled "Technical Report for NI 43-101, Macpass Project, Yukon, Canada" was filed on October 18 2024 at https://www.sedarplus.ca/. For Mactung Mineral Resources, see Fireweed Technical Report entitled "NI 43-101 Technical Report, Mactung Project, Yukon Territory, Canada," with effective date July 28, 2023 filed on https://www.sedarplus.ca/. Garth Kirkham, P.Geo. is independent of Fireweed Metals Corp., and a 'Qualified Person' as defined under Canadian National Instrument 43-101. Garth Kirkham, of Kirkham Geosystems Limited., is responsible for the Mactung Mineral Resource Estimate. Dr. Jack Milton P.Geo., VP Geology, Fireweed Metals and a Qualified Person under the meaning of Canadian National Instrument 43-101, is responsible for all other technical information in this presentation.

Notes
* References to relative size and grade of the Mactung resources and Macpass resources in comparison to other tungsten and zinc deposits elsewhere in the world, respectively, are based on review of the Standard & Poor's Global Market Intelligence Capital IQ database.

PROJECT LOCATIONS & EXISTING INFRASTRUCTURE



Macpass District

Macpass (Zn-Pb-Ag-Ga-Ge) & Mactung (W) Projects

(~985 km² land package)

- **Macpass:** multiple large-scale sediment hosted zinc-primary deposits with mineralization hosted along splays of the Hess-Macmillan structural trend
- **Mactung:** high-grade tungsten skarn deposit hosted within intrusives of the Tombstone Tungsten Belt

Projects Are Accessible Via Road and Existing Airstrip at Site

INVESTMENT HIGHLIGHTS

Continuing to Build off the Momentum from 2024

Advancing a Critical Metals District: Owner of a 985 km² land package, comprising two of the world's largest undeveloped resources in their class:[1]

Mactung (tungsten)

- The world largest high-grade tungsten deposit[1]

Macpass (Zinc-Lead-Silver-Gallium-Germanium)

- One of the world's largest undeveloped zinc assets not held by a major
- 2024 Mineral Resource Estimate ("MRE") more than doubled resource tonnage and tripled contained ZnEq[2] metal in Indicated Resources

Government Critical Metals Funding: ~C$35.40 M in joint U.S. DPA Title III and Canadian CMIF[3] funding to advance Mactung's development and planning for road and power infrastructure supporting the critical metals district at Macmillan Pass

Invested in Growth and Unlocking the District: Over 16,000 m of drilling (post MRE cut-off) driving known mineralized zone extensions and new discoveries. Additional blue-sky potential from regional exploration

Backed by District Builders: a Lundin Group Company

1. References to relative size, grade, and metal content of the Mactung resources and Macpass resources in comparison to other tungsten, zinc, gallium, and germanium deposits elsewhere in the world, respectively, are based on review of the Standard & Poor's Global Market Intelligence Capital IQ database.
2. Zinc equivalency is based on a price of US$1.40/lb Zn, US$1.10/lb Pb, and US$25/oz Ag, CAD:USD exchange rate of 1.32, and a number of operating cost and recovery assumptions specific to each deposit or domain.
3. CMIF funding pending final due diligence.

Note: MRE effective date: September 4, 2024. For complete MRE-related notes refer to the relevant slides at the end of this presentation.

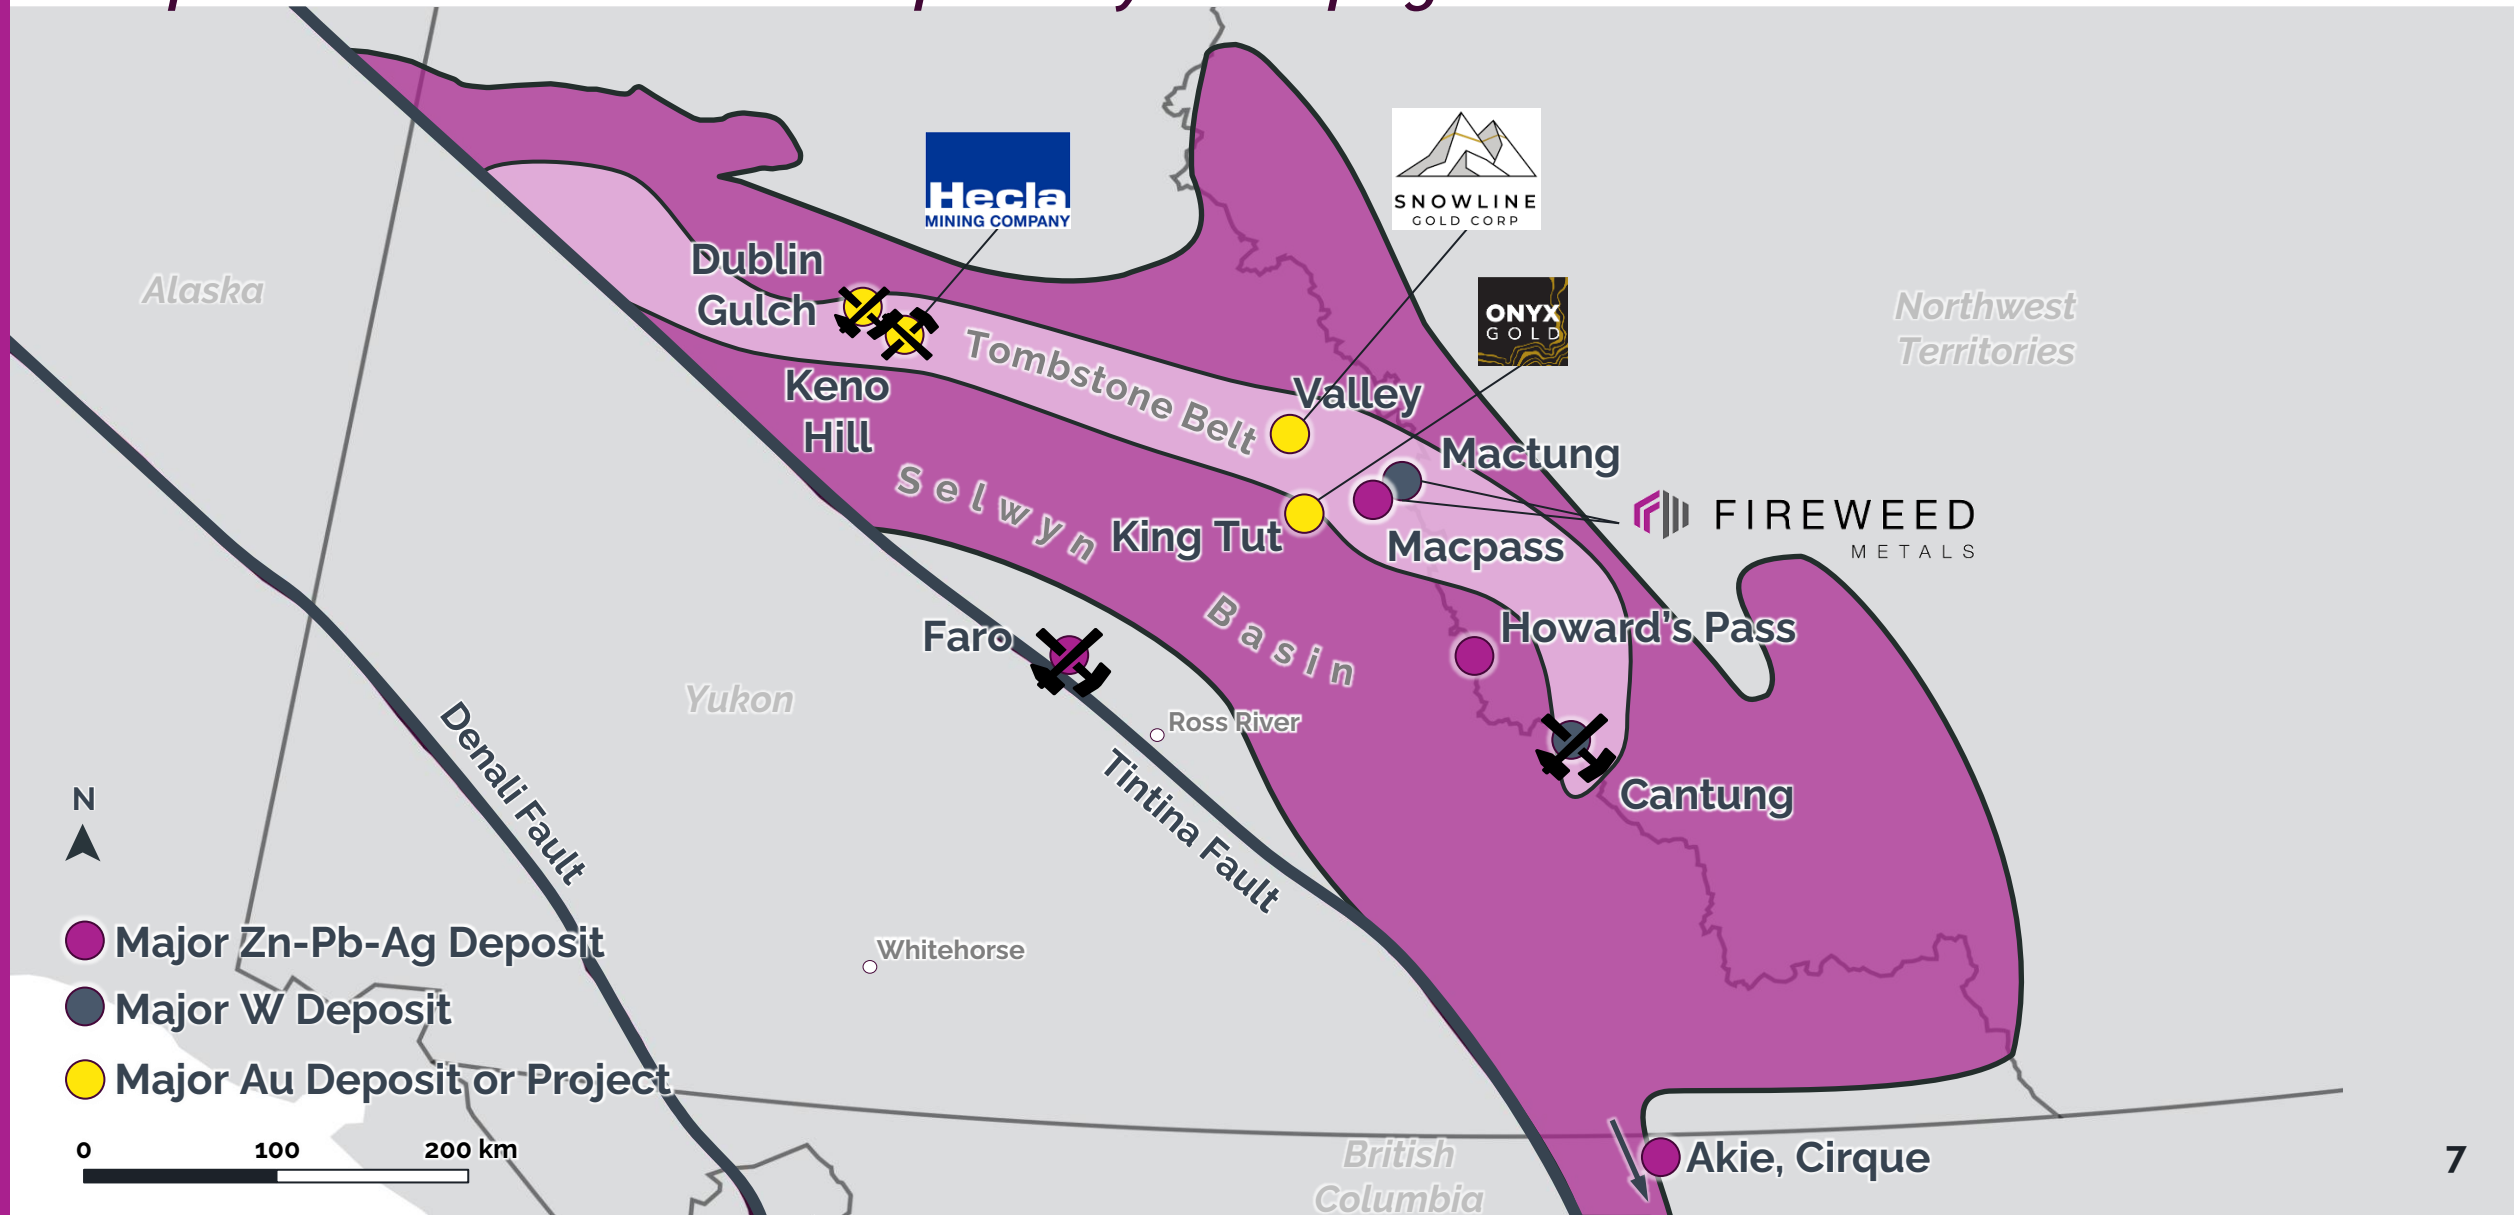
REGIONAL GEOLOGY

Macpass is Located at the Heart of a Fastly Developing Natural Resource Hub



Mactung Project

A Strategic North American Tungsten Resource

We respectfully acknowledge that the Mactung Project is located on the Traditional Territories of the Kaska Dena Nation and the First Nation of Na-Cho Nyäk Dun, and the Sahtu Settlement Area.

THE WORLD'S LARGEST HIGH-GRADE TUNGSTEN DEPOSIT

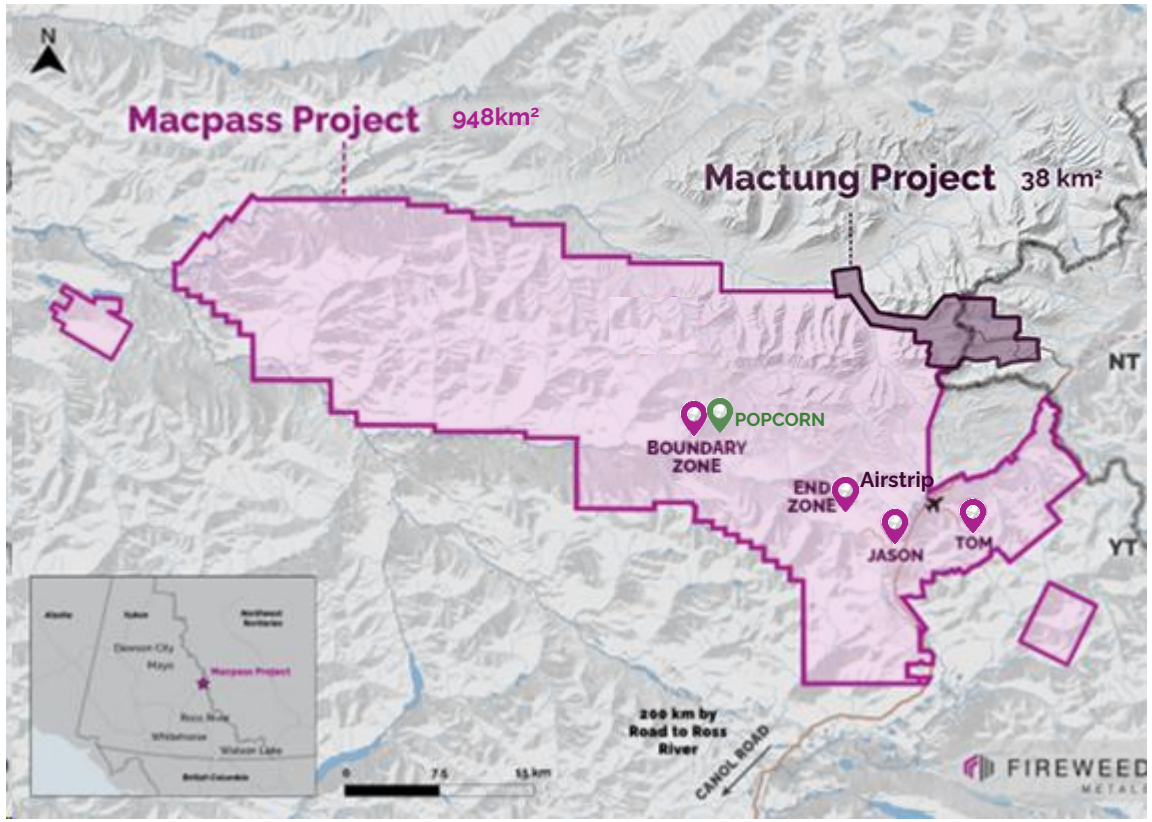
Leading the Way in Unlocking our Critical Metals District

Mactung Highlights

- ✓ Host to a large, high-grade, **tungsten** deposit, 100% owned by Fireweed
- ✓ **Adjacent to Macpass**, and accessible via the North Canol Road and the Macmillan Pass aerodrome
- ✓ Historical **Feasibility Study (2009)**
- ✓ **Environmental Assessment completed in 2014**
- ✓ **Comprehensive drilling and field program is anticipated in 2025** to support project advancement and flowsheet optimization, feeding into an **updated Feasibility Study ("FS") in 2026** and a **Final Investment Decision ("FID") by 2028**

*Fireweed has been awarded **US$15.8 million by the US Department of Defense** under the **Defense Production Act Title III ("DPA")** to **advance Mactung** to a **FID***

No North American Primary Tungsten Production Since 2015



U.S. DPA & CANADA CMIF AWARDS

U.S. Defense Production Act (DPA) Title III

US$15.8 M

Objective

Advance Mactung to a Final Investment Decision ("FID"), a key precursor to the construction and production of domestic tungsten concentrates for the North American industrial base.

Scope

- Mine design optimization
- Geotechnical investigations and metallurgical test programs
- Updated feasibility study
- Environmental studies supporting licenses and permits
- Industry engagement
- Engagement with local Indigenous communities

Benefits & Implications to FWZ

- ✓ **Non-dilutive**
- ✓ **Strategic significance**
  - Positions Mactung as a strategic asset for the North American industrial base
  - Advancement of Mactung to catalyze infrastructure upgrades that benefit the Macpass District
- ✓ **Potential to capitalize on critical mineral tailwinds**
  - Potential for further collaboration with government
  - Foreign export restrictions on tungsten create a favourable market environment for North American producers
- ✓ **No commercial covenants limiting future concentrate sales**

Canadian Critical Mineral Infrastructure Fund

C$12.9 M[1]

Objective

Advance planning efforts to enable infrastructure improvements that serve the critical metals district at Macmillan Pass

Scope

- Support Fireweed's implementation of the first phase (Phase I) of the "North Canol Infrastructure Improvement Project" ("NCIIP"), including preliminary designs for:
  - Approximately 250 km of road improvements
  - Upgrades to an existing transmission line between Faro and Ross River
  - Construction of a new transmission line from Ross River to Macmillan Pass

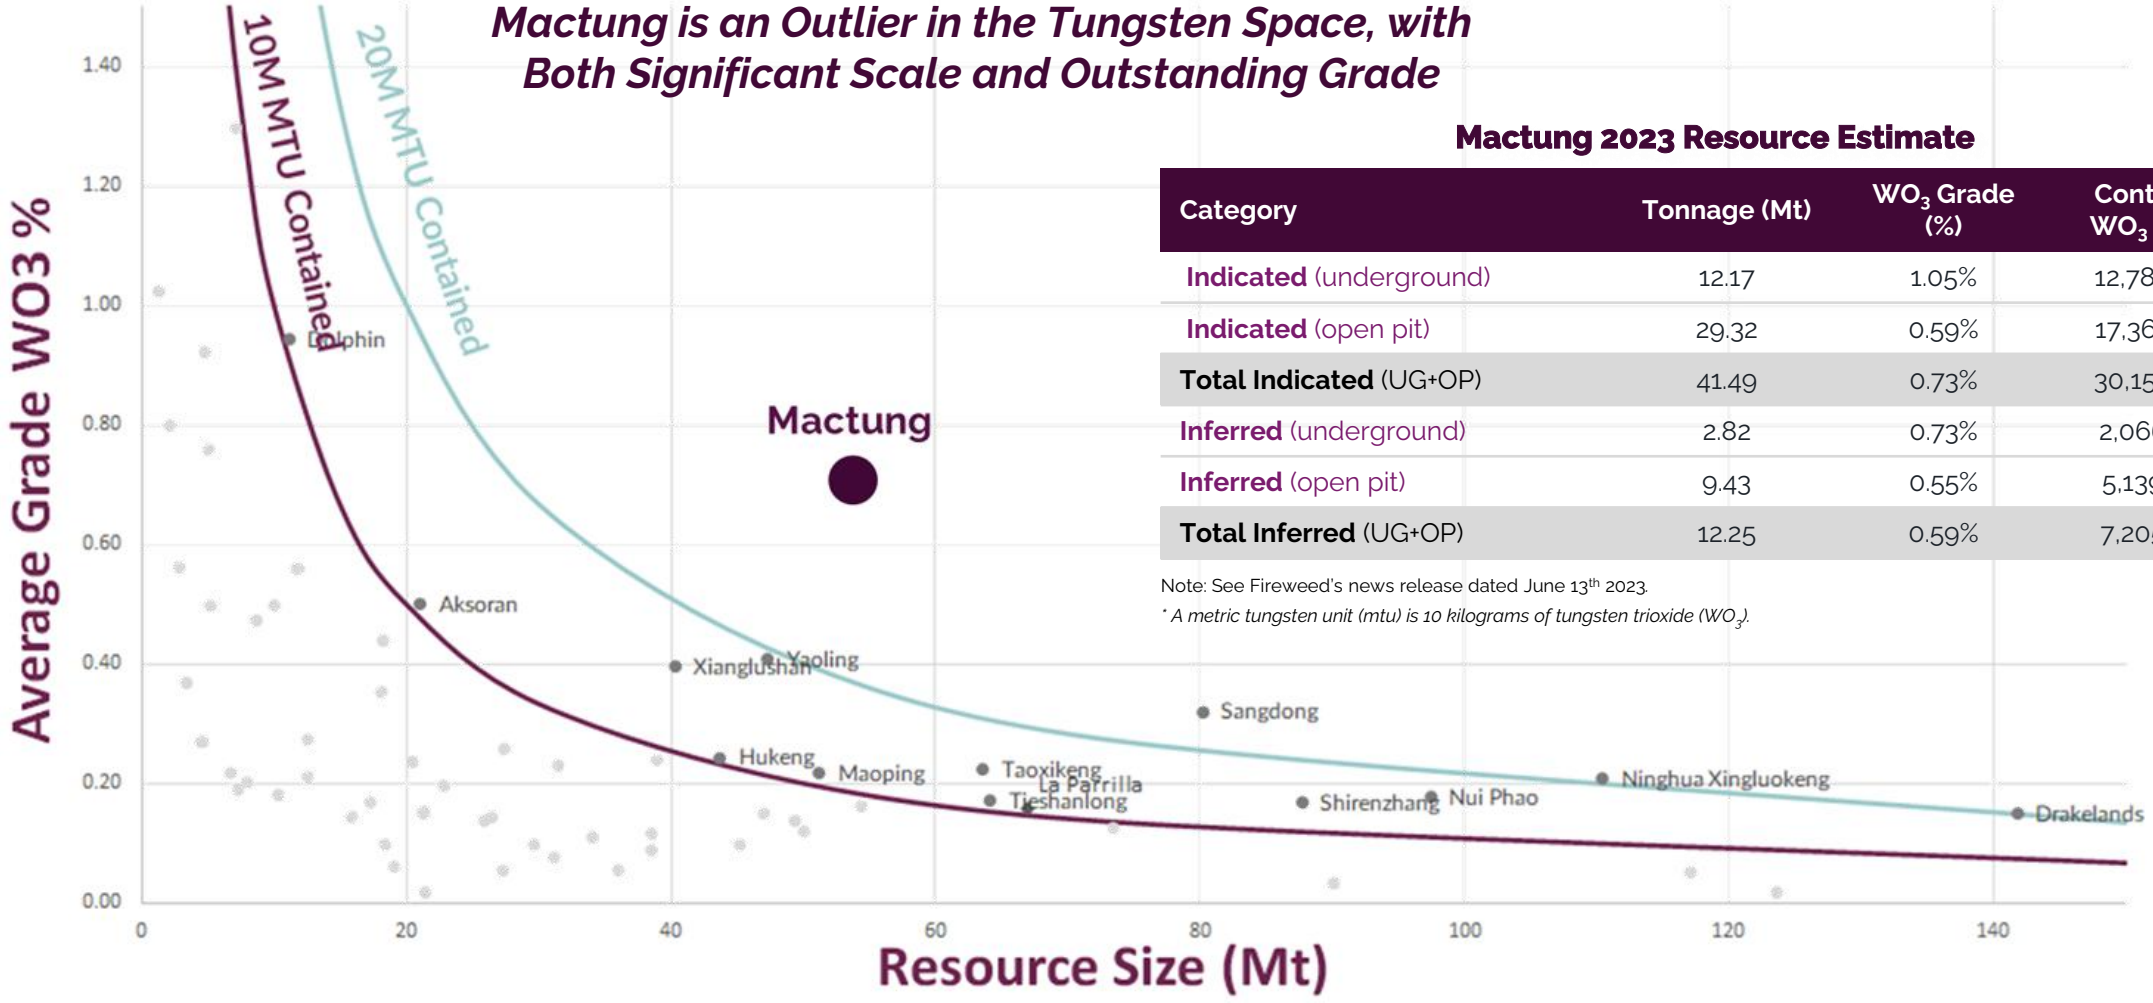
Benefits & Implications to FWZ

- ✓ **Non-dilutive**
- ✓ **Supports critical infrastructure necessary to unlock the critical metals district at Macpass**
- ✓ **Enhances the economics of future mine development at Macmillan Pass**

[1] Pending final due diligence

MACTUNG STANDS OUT

Mactung is an Outlier in the Tungsten Space, with Both Significant Scale and Outstanding Grade



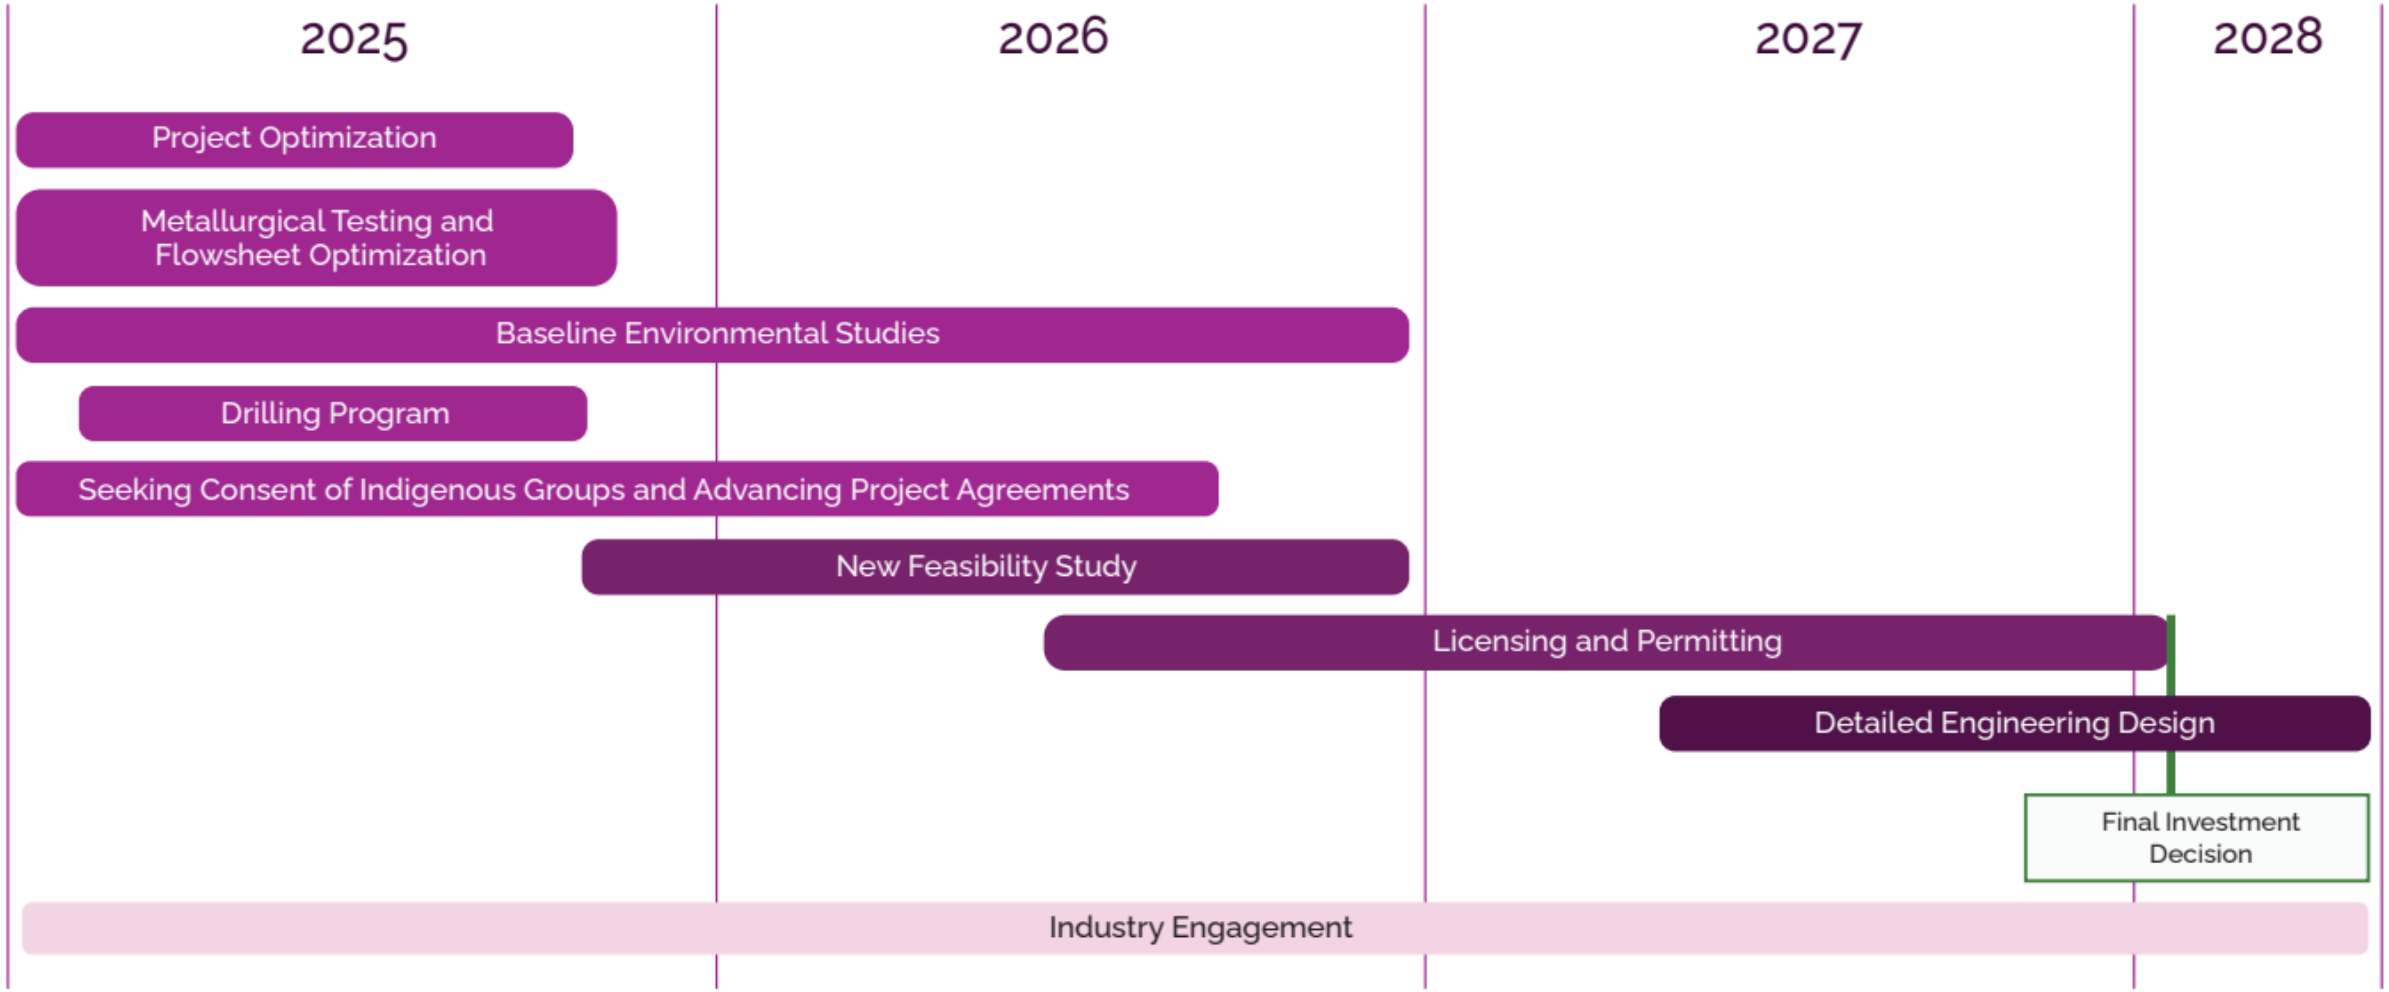
Mactung 2023 Resource Estimate

Category	Tonnage (Mt)	WO_3 Grade (%)	Contained WO_3 (mtu)*
Indicated (underground)	12.17	1.05%	12,789,000
Indicated (open pit)	29.32	0.59%	17,367,000
Total Indicated (UG+OP)	41.49	0.73%	30,156,000
Inferred (underground)	2.82	0.73%	2,066,000
Inferred (open pit)	9.43	0.55%	5,139,000
Total Inferred (UG+OP)	12.25	0.59%	7,205,000

Note: See Fireweed's news release dated June 13th 2023.

** A metric tungsten unit (mtu) is 10 kilograms of tungsten trioxide (WO_3).*

MACTUNG DPA PROGRAM TIMELINE



Note: estimated timeline

Macpass Project

Rapidly-growing District

We respectfully acknowledge that the Macpass Project is located on the Traditional Territories of the Kaska Dena Nation and the First Nation of Na-Cho Nyäk Dun.

MACPASS DISTRICT

Multiple Large-scale Sediment Hosted Zinc-primary deposits Forming One of the World's Largest Undeveloped Zinc Districts[1]

Macpass 2024 MRE

55.98 Mt at 7.27% ZnEq[2,3] — **Indicated**
(5.49% Zn, 1.58% Pb, and 24.2 g/t Ag)

+

48.46 Mt at 7.48% ZnEq[2,3] — **Inferred**
(5.15% Zn, 2.08% Pb, and 25.3 g/t Ag)

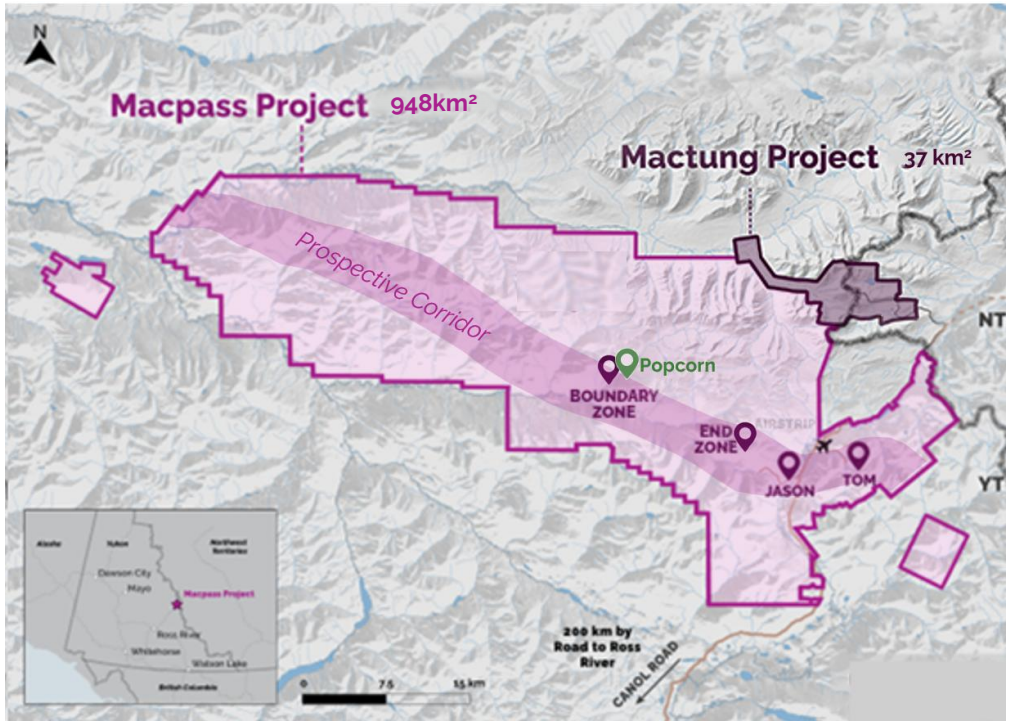
Globally Significant Gallium (Ga) and Germanium (Ge) Metal Content

- 412,900 kg **Ga** + 614,800 kg **Ge** by-product in **Indicated** Resource[3]
- 282,100 kg **Ga** + 394,400 kg **Ge** by-product in **Inferred** Resource[3]

Highlights

- ✓ **Over 16,000 m drilled in 2024** (post MRE cut-off) driving known mineralized zone extensions and new discoveries
- ✓ Comprehensive **regional exploration** efforts in 2024 to inform new drill targets in 2025
- ✓ **Structural control** along the Prospective Corridor (~950 km² land package) to drive additional blue-sky
- ✓ Potential for **intrusion-related Au** targets

The Macpass District

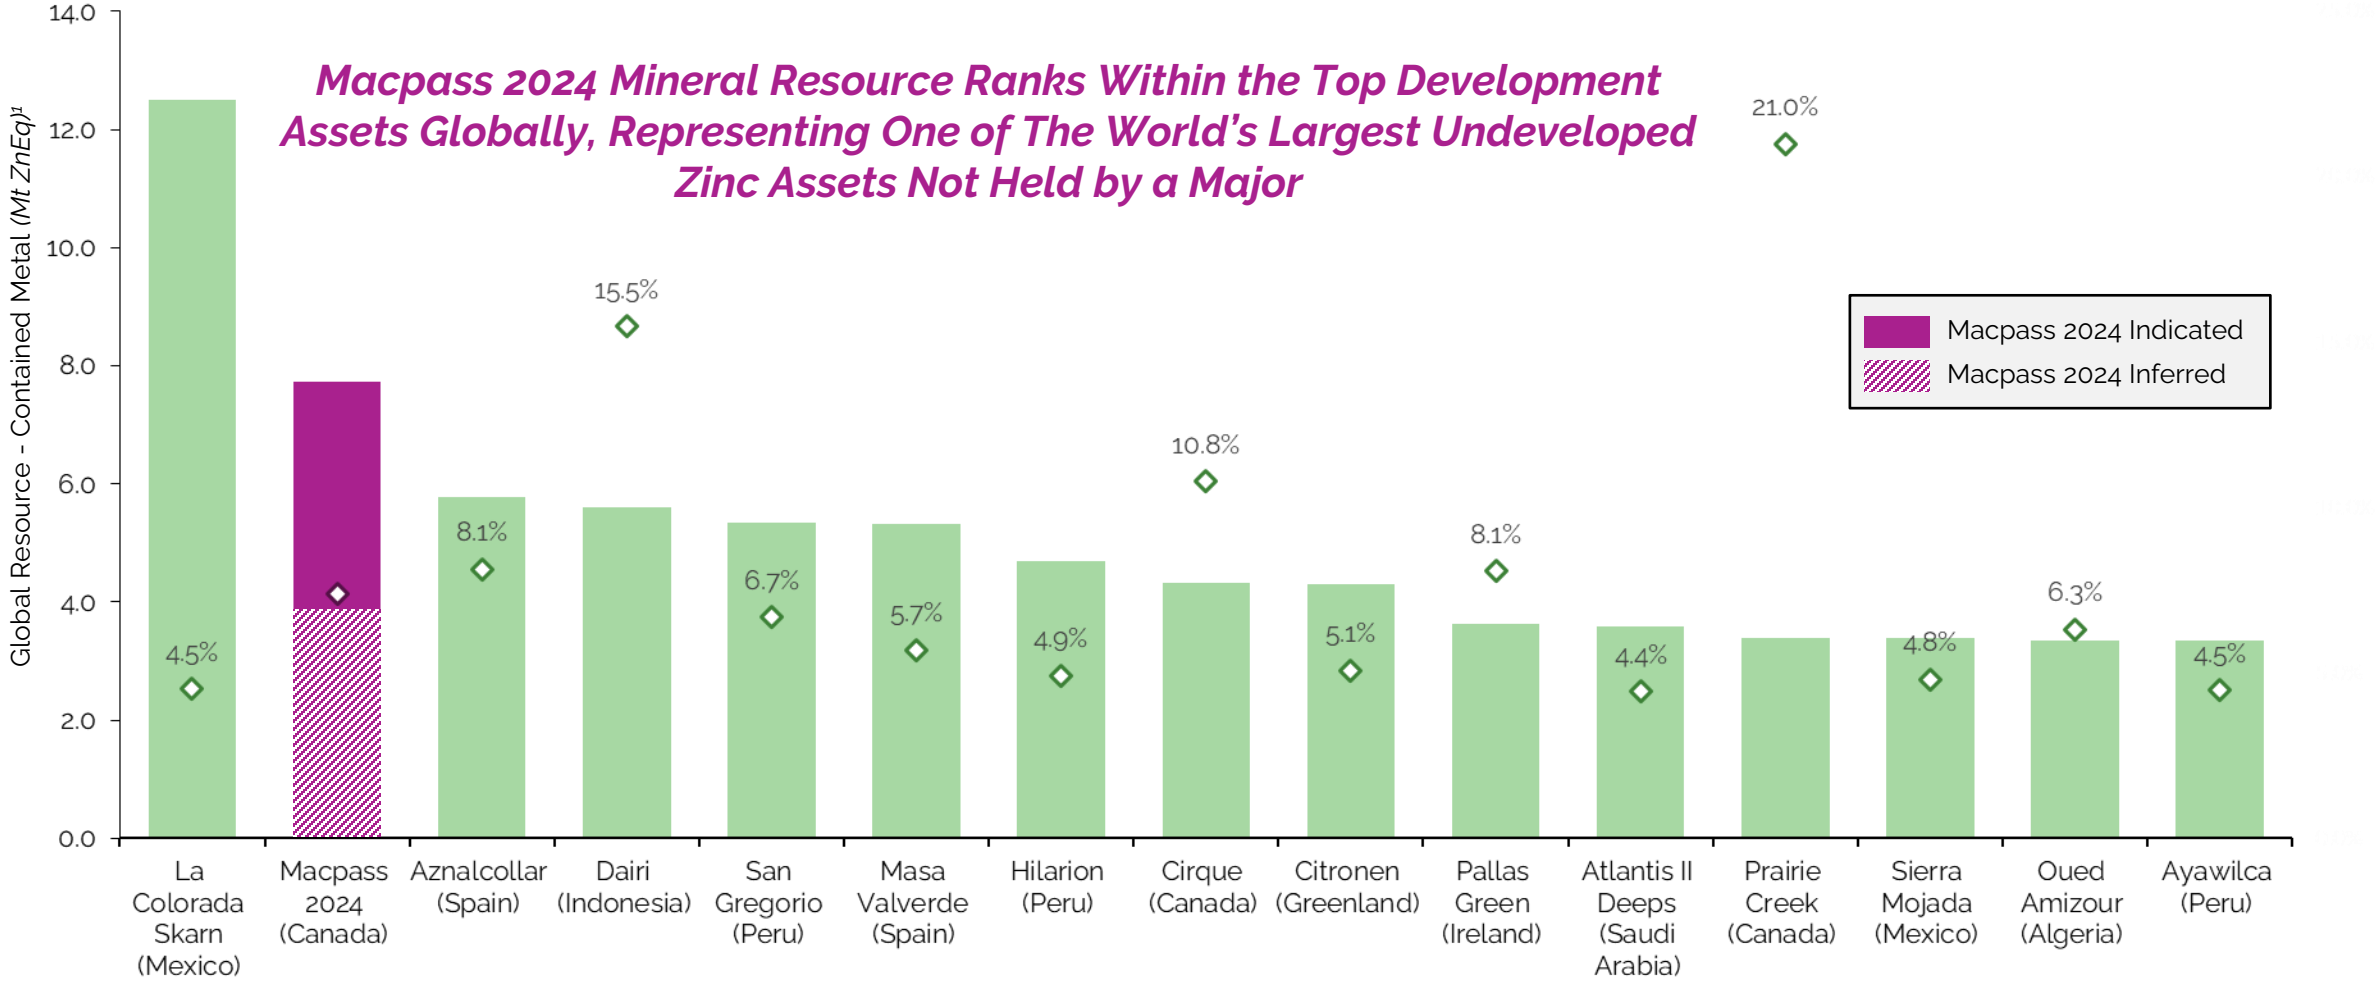


Macpass Project Claims — Mactung Project Claims

1 References to relative size, grade, and metal content of the Mactung resources and Macpass resources in comparison to other tungsten, zinc, gallium, and germanium deposits elsewhere in the world, respectively, are based on review of the Standard & Poor's Global Market Intelligence Capital IQ database. 2 Zinc equivalency is based on a price of US$1.40/lb Zn, US$1.10/lb Pb, and US$25/oz Ag, CAD:USD exchange rate of 1.32, and a number of operating cost and recovery assumptions specific to each deposit or domain. Gallium and germanium do not contribute to the zinc equivalency calculations in the MRE. The 2018 NI43-101 technical report on the previous mineral resource is available for comparison on https://www.sedarplus.ca/.3 There is no known precedent for germanium or gallium to be payable in zinc concentrates. Therefore, Fireweed have attributed zero value to gallium and germanium in the Net Smelter Return ("NSR") calculations used to define the mineral resource and germanium and gallium do not contribute to the Reasonable Prospects for Eventual Economic Extraction ("RPEEE") associated with resource category classification.

MACPASS RELATIVE POSITIONING

Select Zinc-primary Development Assets - *Ranked by Contained Metal (Mt ZnEq ; % ZnEq)*[*]



Note: Ranking excludes assets located in China, Russia, Iran, and Myanmar, as well as assets that are unlikely to be developed or advanced due to technical challenges (Selwyn, Admiral Bay, Reward, Hackett River).

[*] ZnEq quantities calculated based on the content of the following metals: Zn, Pb, Cu, Ag, Au. ZnEq pricing based on Macpass 2024 MRE assumptions (US$1.40/lb Zn, US$1.10/lb Pb, US$25.0/oz Ag) and LT analyst consensus estimates (US$4.08/lb Cu and US$1,915/oz Au. Source SNL Cap IQ and company public disclosure.

FIELD PROGRAM OVERVIEWS

2024 Program Overview - Macpass

Activities	**+16,000 m Drilling** *Combination of step-out holes at Boundary Zone, Tom South and Jason South + exploration drilling at new targets*	**Regional Exploration** *Gravity, VTEM, LiDAR, soil Sampling, and Muon Survey*
Outcome	▸ Successful high-grade step-outs at Tom, Jason and Boundary (post 2024 MRE cut-off) ▸ Discovery of **Popcorn**—moving from a prospect to a deposit	▸ Multiple drill-ready targets have been generated, including **zinc-lead-silver-gallium-germanium** targets and intrusion-related **gold** targets

2025 Program Overview

Macpass - *Targeted Exploration*

Program will build on 2024 successes

- Focus on advancing regional exploration targets with the highest prospectivity by drill-testing (**zinc–lead–silver**-gallium-germanium & **gold** targets)

Mactung – *Comprehensive Field Program*

- Extensive field program to support project optimization feeding into an **updated FS**:
- **Up to 8,000 m drilling** program consisting of holes performing multiple functions: geometallurgy, hydrogeology, and geotechnical
- Additional historical drill core scanning and expanded gold assay coverage

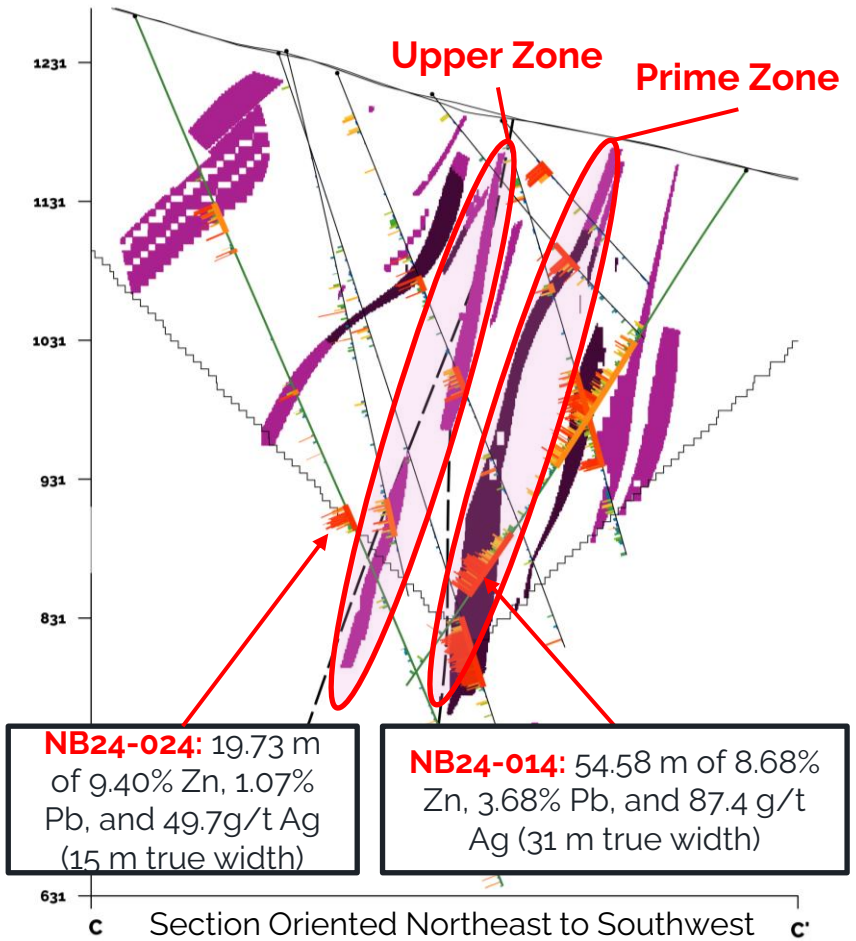
Gayna – *Inaugural Drilling*

- **Up to 3,000 m drilling** planned over 10 to 12 drill holes to test for high-grade **zinc-lead-silver** mineralization along identified reef margin anomalies
- Mobilization to winter airstrip planned in March 2025

Fireweed is Gearing Up for a Robust Season

2024 PROGRAM HIGHLIGHTS

Boundary Step-outs



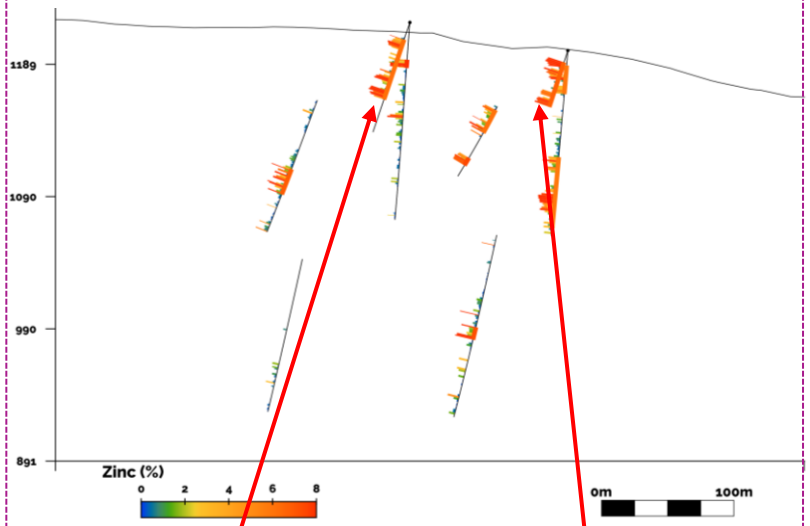
NB24-024: 19.73 m of 9.40% Zn, 1.07% Pb, and 49.7g/t Ag (15 m true width)

NB24-014: 54.58 m of 8.68% Zn, 3.68% Pb, and 87.4 g/t Ag (31 m true width)

Section Oriented Northeast to Southwest

Popcorn Discovery

(600m Northeast of Boundary)

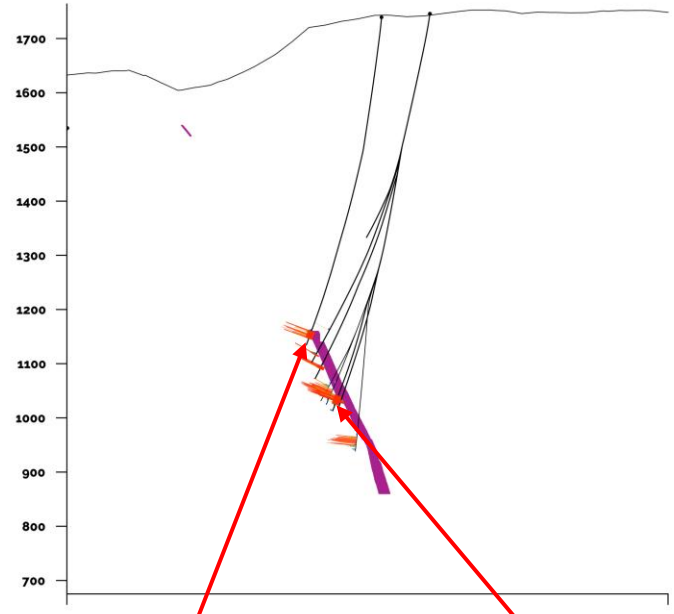


NB24-002: 54.75 m at 3.98% Zn and 3.9 g/t Ag

NB24-004: 46.03 m at 4.88% Zn and 3.6 g/t Ag

Section Oriented West to East

Tom South Step-outs



TS24-002: 15.12 m at 10.39% Zn, 18.10% Pb, and 296.9 g/t Ag

TS24-001: 18.15 m at 9.02% Zn, 7.46% Pb, and 148.3 g/t Ag

Section Oriented West to East

0m 200m

DISTRICT POTENTIAL

Genetic Model and Geophysical Anomalies in the Macpass District Suggest the Potential for Further Discoveries

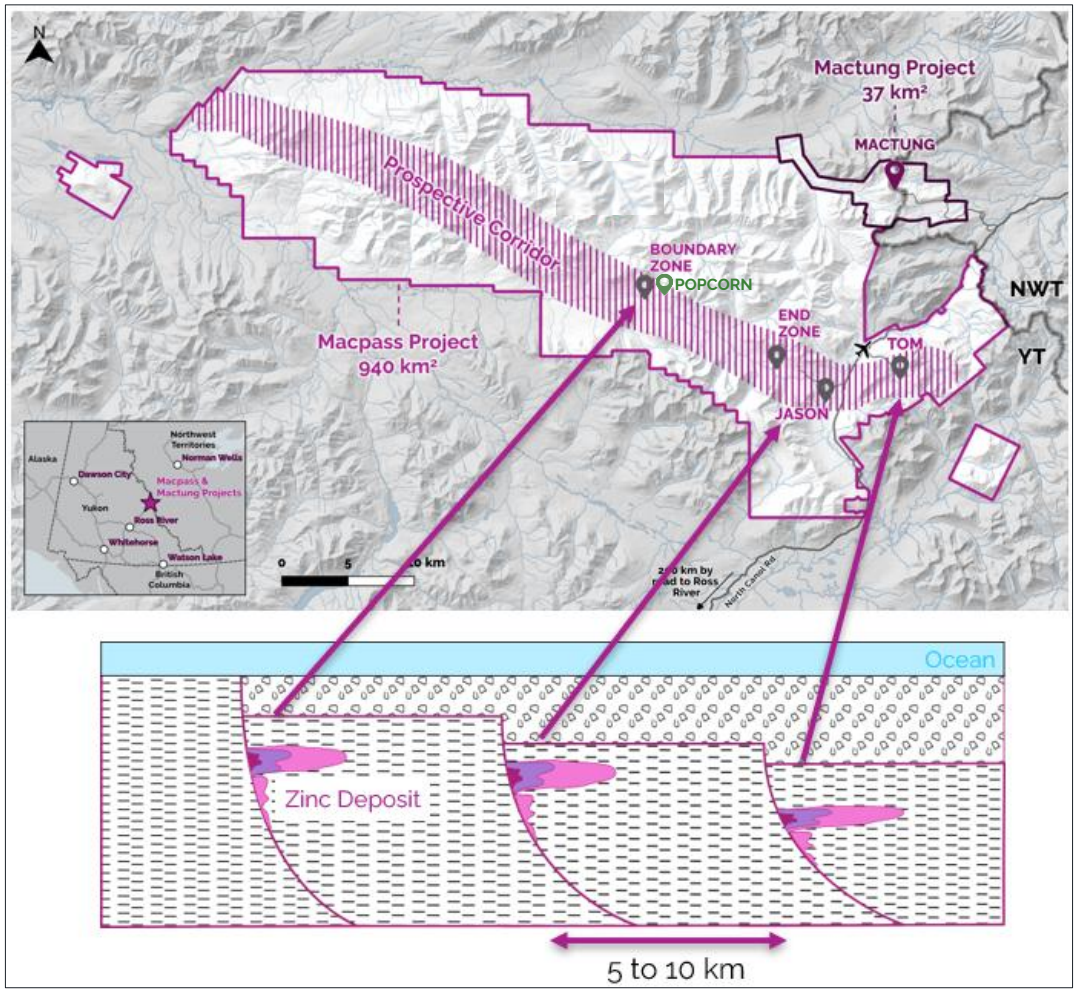
Structural and Stratigraphic Control

Tom, Jason, End Zone, and Boundary deposits are located along **5-10 km spaced feeder-fault splays of the Macmillan-Hess Fault System**

Same fault systems and prospective geology occur throughout the length of the Macpass project tenure area, along a pathway referred to as the **"Prospective Corridor"**

Prospective Corridor Exploration Potential

Geophysical anomalies, coincident soil and rock geochemical anomalies, and a history of **systematic under-exploration for base metals**, make it an exceptionally attractive target



Note:: The simplified genetic model shows a proposed sub-surface depositional environment, with the curved pink lines representing the "stepping" faults controlling the distribution of the deposits. The pink plumes in the schematic cross section represent the theoretical environment where deposits at Tom, Jason, and Boundary formed within the sediment column, and are displayed prior to any deformation.

Gayna Project

High Impact Frontier Exploration

We respectfully acknowledge that the Gayna Project is located within Settlement Areas of Sahtu and Gwich'in, and the Traditional Territory of First Nation of Na-Cho Nyäk Dun.

EXPLORATION POTENTIAL FOR ZINC, GERMANIUM, GALLIUM, LEAD, AND SILVER

Gayna Provides Optionality and Further Exposure to Critical Metals

- Located 180 km north of Macpass, in the Mackenzie Mountains, NWT
- Gayna's geological setting and mineralization are similar to that of a reef-style deposit, like Ivanhoe's high-grade Kipushi mine in DRC
- High-grade rock samples confirmed the presence of massive sulphide mineralization, also containing elevated gallium (Ga) and germanium (Ge)
- Ground gravity surveys identified drill targets on reef margins
- Airborne geophysics survey conducted in 2024 to inform drill targets
- Drill program planned for 2025 (up to 3,000 m)

Boulder sample of massive galena and green sphalerite from Gayna Project.

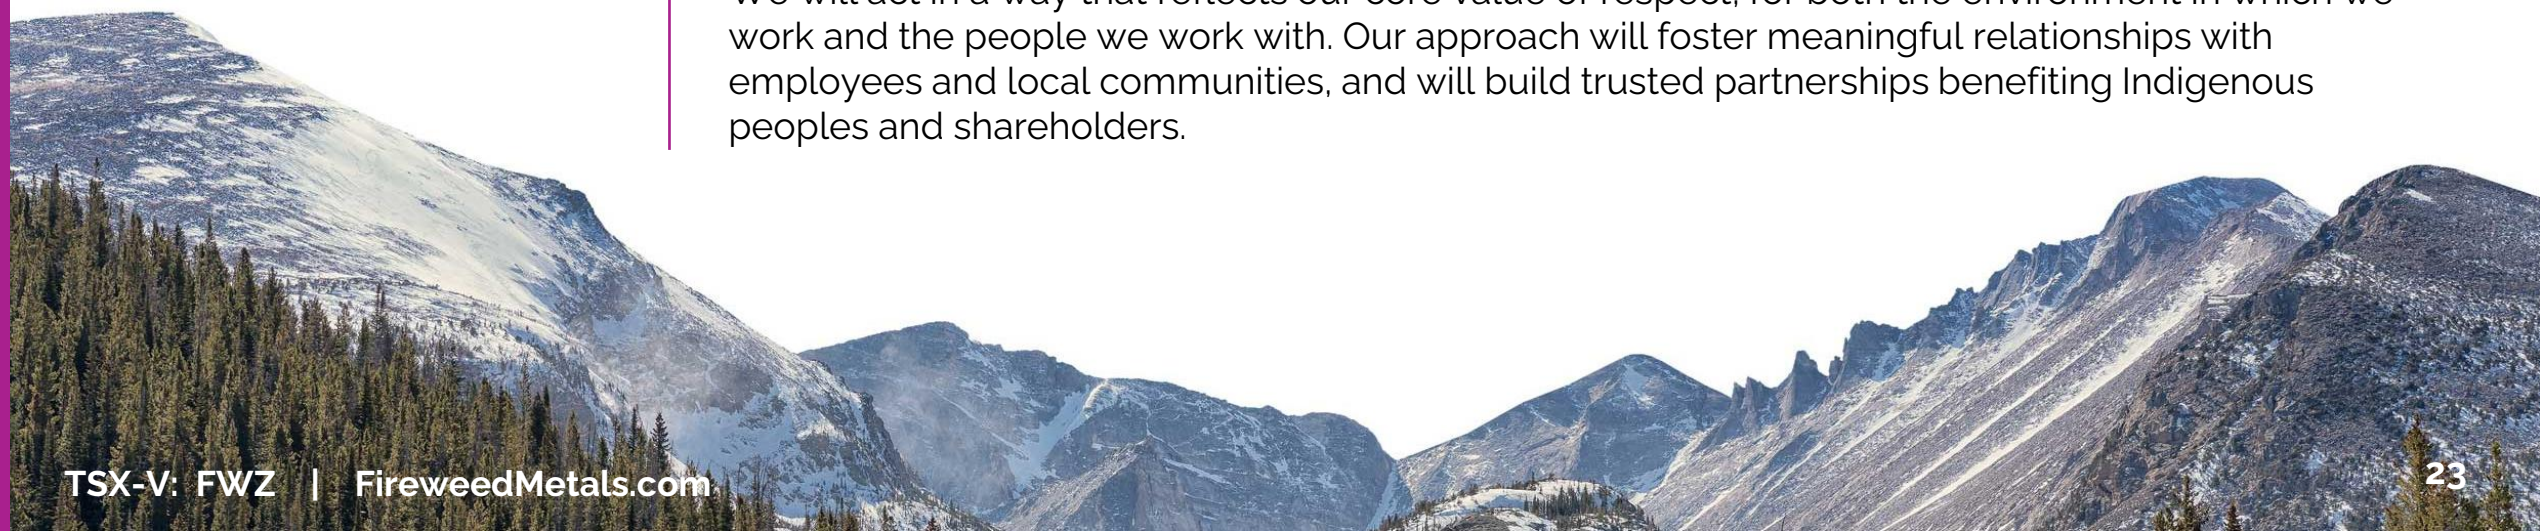
ABOUT FIREWEED METALS

Fireweed is a Canadian company with the mission to explore and develop critical metals assets through progressive leadership, high standards, innovation, and collaborative partnerships for the benefit of present and future generations.

OUR VISION

Fireweed Metals will sustainably explore and develop critical minerals assets to support the transition to a low-carbon economy. We will focus on leading with integrity, striving for consistency in words and actions, being honest, transparent, and accountable, mitigating health and safety risks, and being progressive and innovative while promoting environmental and social stewardship.

We will act in a way that reflects our core value of respect, for both the environment in which we work and the people we work with. Our approach will foster meaningful relationships with employees and local communities, and will build trusted partnerships benefiting Indigenous peoples and shareholders.



OUR VALUES

INTEGRITY

Honesty, transparency, accountability, environmental and social stewardship

PARTNERSHIPS

Creating opportunities, realizing benefits, advancing together

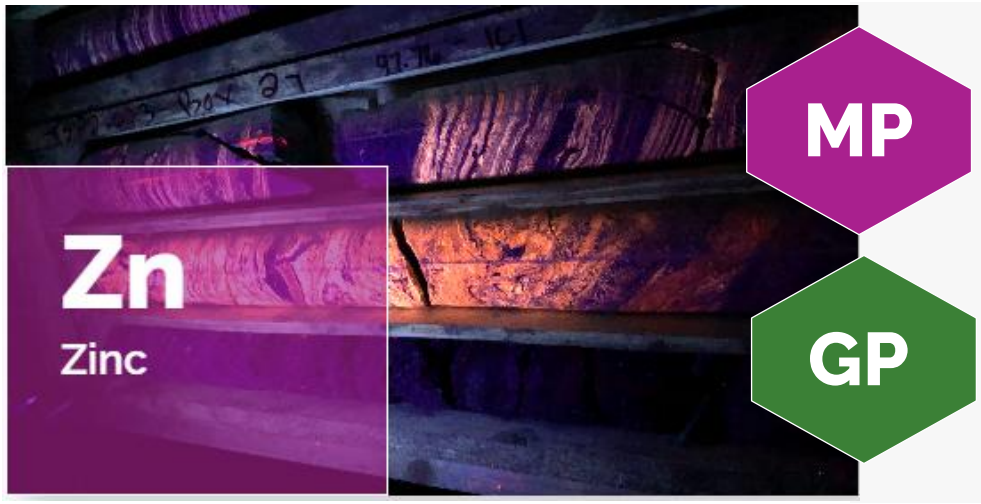
PEOPLE

Inclusivity, collaboration, health & safety

SUSTAINABILITY APPROACH

- Implement robust practices informed by the aspirations and interests of Indigenous peoples
- Be environmentally and socially responsible
- Seek the consent of local Indigenous groups

COMMODITY FUNDAMENTALS



Zinc's unique properties make it an essential metal for everyday life. Zinc plays a crucial role in:

- Renewable Energy
- Transportation
- Food Security
- Energy Storage
- Healthcare
- Infrastructure
- Industrial Applications
- Electronics

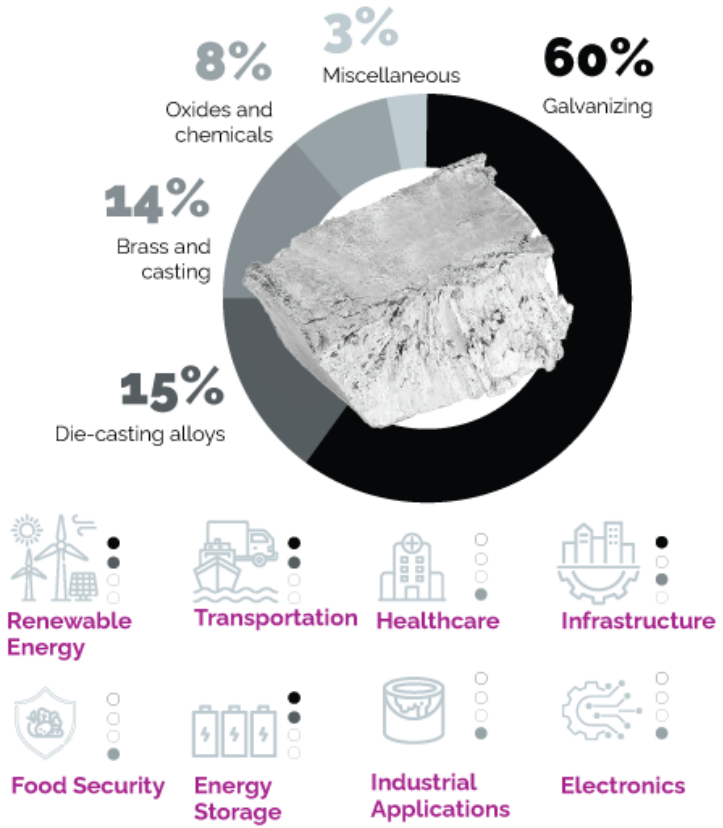
Tungsten is an extremely versatile metal, essential for industrial applications in the following sectors :

- Automotive parts
- Aerospace & Defense
- Industrial machinery
- Drilling
- Boring and cutting equipment
- Logging and mining
- Electrical and electronics appliances

WHY ZINC?

Uses & Applications*

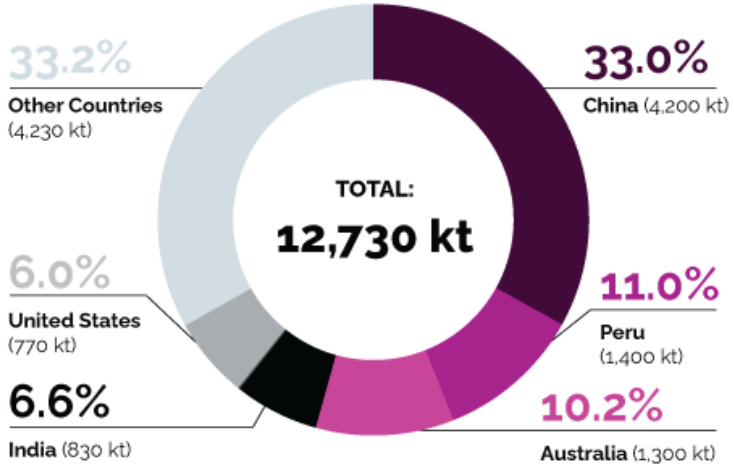
Zinc's unique properties make it an extremely versatile metal, essential for everyday life. Zinc plays a crucial role in:



*Source: Government of Canada, "Zinc facts", 2021

Zinc Supply

Worldwide Zinc Mine Production in 2022 (kt)*

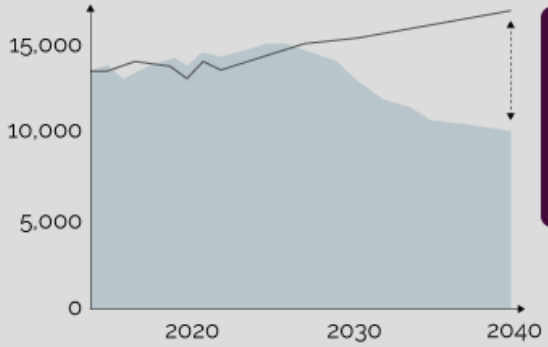


China is the largest zinc producer, with 33% of the world's zinc production in 2022.

*Source: U.S. Geological Survey, "Mineral Commodity Summaries", 2023

Zinc Demand Outlook

Zinc Mine Production and Demand (kt)



6.9 Mt projected mine supply gap by 2040

Zinc demand is expected to steadily increase, underpinned by energy transition uses, while supply is expected to fall systematically starting 2025, primarily driven by declining production rates at existing mines and fewer new projects coming on-line.

Sources: Wood Mackenzie, CRU, IZA, BGRIMM, SMM, Teck.

WHY TUNGSTEN?

Uses & Applications

Tungsten's unique properties make it excellent for industrial applications in the following sectors:

By application:

- Automotive parts
- Aerospace & Defense
- Industrial machinery
- Drilling
- Boring and cutting equipment
- Logging & Mining
- Electrical & electronics appliances

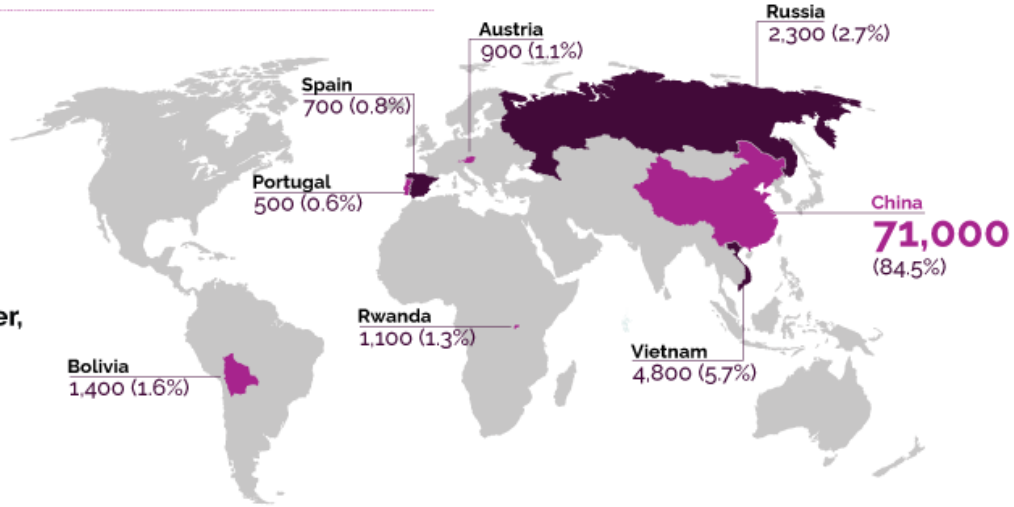
Legend:

- **Tungsten carbide**
- **Tungsten alloys & mill products**

Scheelite ($CaWO_4$) mineral ore is the preferred source of tungsten

Tungsten Supply

Global production of tungsten in 2022, by country (tonnes)*



China is the world's largest tungsten producer and exporter, with

84.5%

of the world's tungsten in 2022.

Market Factors

No domestic tungsten sources

There has been no North American production of tungsten concentrates since 2015.

Potential supply disruptions

China's dominance of global tungsten primary production has raised concerns about western supply chain vulnerabilities in the event of conflict or embargo.

Critical and strategic

Tungsten has been added to the U.S. and Canada lists of critical metals because of its strategic importance to the countries' economies and national security.

The Canada-US Joint Action Plan on Critical Minerals Collaboration is a strategic plan aiming to advance bilateral interest in securing supply chains for the critical minerals needed for strategic manufacturing sectors, including communication technology, aerospace and defense, and clean technology.

WHY MACTUNG?

CRITICAL METAL

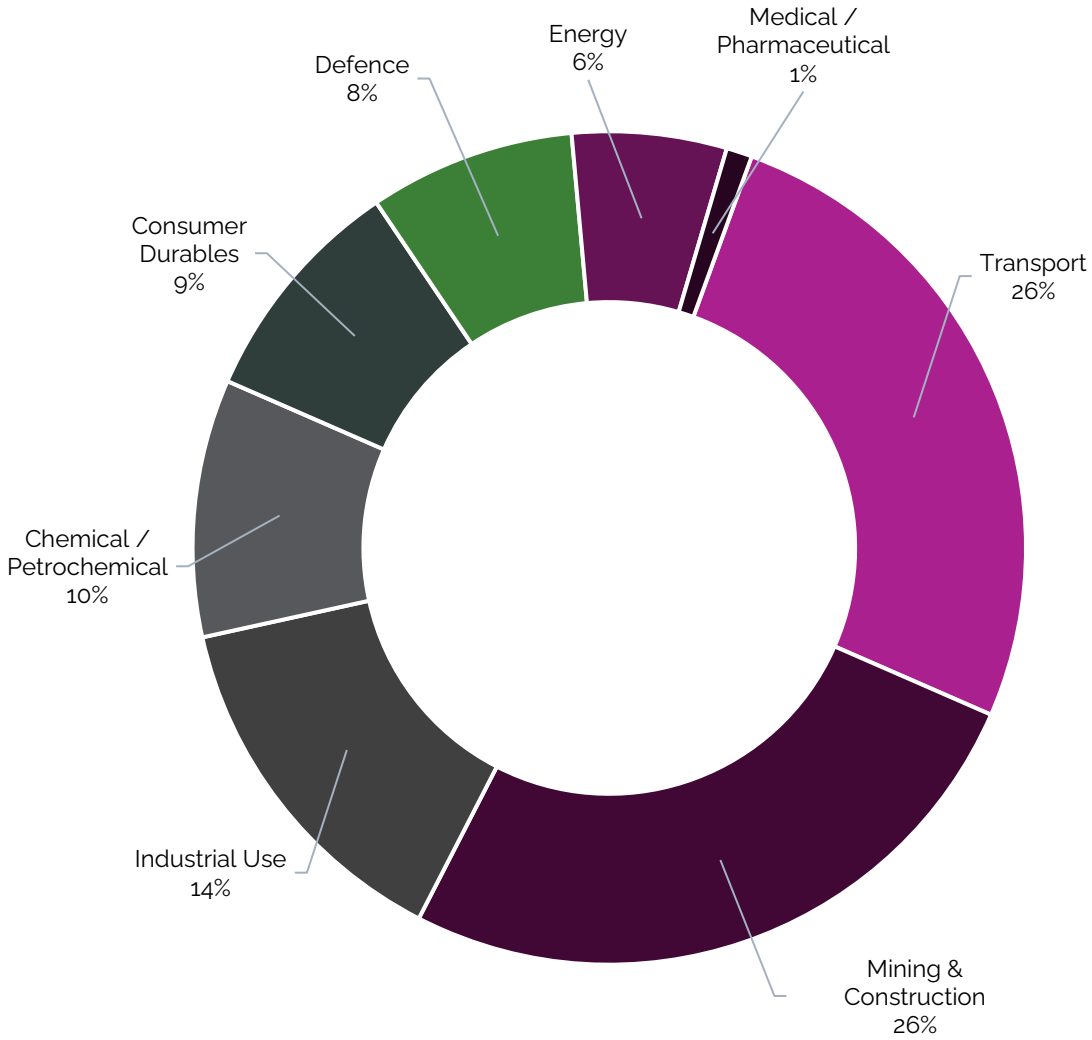
The U.S., Canada and the EU have designated tungsten a critical metal. It has extreme physical characteristics necessary for many industries.

CHINA MARKET DOMINATION

China controls most of the world's tungsten deposits and production, creating risks to the west in an uncertain future.

CHANGING WORLD

Recent world events have sharpened the focus of western governments on critical metals, creating an opportunity to establish a reliable western source of tungsten.



TUNGSTEN END-USE BY INDUSTRY

Industry data 2021, https://www.itia.info/applications-markets/

2024 MACPASS DEPOSIT GEOLOGY

- **Stratiform, Sediment-Hosted Zn-Pb-Ag Deposits:** The Tom, Jason, End Zone, and Boundary Zone deposits are examples of clastic-dominated (CD) sediment-hosted massive sulphide deposits
- **Mineralization Model Reinterpreted from Classic SEDEX Models:** involves replacement of porous, barite-rich sediments in a sub-seafloor environment rather than strict seafloor exhalation
- **Distinct Mineralization Styles:**
  - **Early Stage:** Finely laminated pyrite, sphalerite, and galena, grading to semi-massive and massive sulphides near feeder structures. Generally associated with barite-rich layers at various stratigraphic levels
  - **Boundary Zone:** Features a later, cross-cutting style with breccia, veins, and siderite-rich replacement textures within conglomerates and volcaniclastics
- **Geological Domains:**
  - **Tom**: Sub-domained into distinct facies (black, grey, pink, massive sulphide)
  - **Boundary Zone**: Divided into Massive Sulphide, Boundary Vein, and lower-grade Boundary Halo domains

Early-stage Mineralization - *Two Step Genetic Model*

Note: MRE effective date: September 4, 2024. For complete MRE-related notes refer to the relevant slides at the end of this presentation.
1 Zinc equivalency is based on a price of US$1.40/lb Zn, US$1.10/lb Pb, and US$25/oz Ag, CAD:USD exchange rate of 1.32, and a number of operating cost and recovery assumptions specific to each deposit or domain.

RESOURCE FOOTNOTES

- All mineral resources have been estimated in accordance with CIM definitions, as required under NI 43-101.
- Data for this mineral resource estimate has been independently reviewed and validated by a third-party consultancy, SLR Consulting (Canada) Ltd.
- Pierre Landry P.Geo. of SLR Consulting (Canada) Ltd. ("SLR") is independent of Fireweed Metals Corp., and a 'Qualified Person' as defined under NI 43-101. Pierre Landry is responsible for the Macpass Mineral Resource Estimate. g/t: grams per tonne; Mlbs: million pounds; Moz: millions of troy ounces; Mt: million metric tonnes.
- Mineral resources are reported within conceptual open pit ("OP") shells and underground ("UG") mining volumes to demonstrate Reasonable Prospects for Eventual Economic Extraction ("RPEEE"), as required under NI 43-101; mineralization lying outside of the OP shell or UG volumes is not reported as a mineral resource. Note the conceptual OP shell and UG volumes are used for mineral resource reporting purposes only and are not indicative of the proposed mining method; future mining studies may consider UG mining, OP mining or a combination of both. Mineral resources are not mineral reserves and do not have demonstrated economic viability.
- All quantities are rounded to the appropriate number of significant figures; consequently, sums may not add up due to rounding.
- All prices in Canadian dollars unless otherwise stated.
- Open Pit mineral resources are reported at a pit wall angle of 45°, Revenue Factors of 0.8 (Tom, End Zone), 0.6 (Jason), 1.0 (Boundary Zone), and Net Smelter Return ("NSR") cut-off of $30/tonne ("t").
- Underground mineral resources are constrained within reporting panels with heights (H) of 20 m, lengths (L) of 10 m, with 10 m H and 5 m L sub-shapes and minimum widths of 2 m at Tom, Jason, and End Zone; and 20 m H by 20 m L with 10 m sub-shapes and a minimum width of 5 m at Boundary Zone, using an average panel NSR cut-off of $112/t.
- NSR block values and zinc equivalency are based on a price of US$1.40/lb Zn, US$1.10/lb Pb, and US$25/oz Ag, CAD:USD exchange rate of 1.32, and a number of operating cost and recovery assumptions specific to each deposit or mineralization domain (see Tables 2 and 3 from Fireweed's News Release September 4, 2024).
- ZnEq has been calculated on a block-by-block basis using the NSR calculation and input parameters related to each deposit or mineralization domain (see Tables 2 and 3 from Fireweed's News Release September 4, 2024). For reporting subtotals and totals, ZnEq values have been calculated using the mass weighted average of the ZnEq block values of each respective domain for its respective classification category within OP and UG reporting volumes.
- The effective date of the MRE is September 4, 2024 and the MRE is based on all drilling data up to and including holes drilled in 2023 with a final database cut-off date of June 23, 2024. The MRE does not include any data from holes drilled in 2024.
- Inferred mineral resources are considered too speculative geologically to have economic considerations applied to them that would enable them to be categorized as mineral reserves. There is also no certainty that these inferred mineral resources will be converted to the measured and indicated categories through further drilling, or into mineral reserves, once economic considerations are applied. The Inferred Mineral Resource in this estimate has a lower level of confidence than that applied to an Indicated Mineral Resource and must not be converted to a Mineral Reserve. It is reasonably expected that the majority of the inferred Mineral Resource could be upgraded to an Indicated Mineral Resource with continued exploration.
